The book consists of four different parts: the concepts of exercise and physical activity, exercise types and prescriptions are presented in the first part. The second part is dedicated to musculoskeletal anatomy specific to functional exercise, while the third part explores functional exercise specific systems, physiology, and illustrates the compliance of each system with exercise. Basic exercise physiology information and the evaluation and treatment of individuals who are healthy and have diseases that affect each system. Finally, the book has the part of a special topic dealing with nutrition, nutritional supplements affecting recovery in the rehabilitation process after injury or surgery, and supporting physical performance during exercise sports.
