Huang,2023-01-01 The long history of China s relationship between stability diversity and prosperity and how its current leadership threatens this delicate balance Riveting Tunku Varadarajan Wall Street Journal A Foreign Affairs Best Book of 2023 Chinese society has been shaped by the interplay of the EAST exams autocracy stability and technology from ancient times through the present Beginning with the Sui dynasty s introduction of the civil service exam known as Keju in 587 CE and continuing through the personnel management system used by the Chinese Communist Party CCP Chinese autocracies have developed exceptional tools for homogenizing ideas norms and practices But this uniformity came with a huge downside stifled creativity Yasheng Huang shows how China transitioned from dynamism to extreme stagnation after the Keju was instituted China s most prosperous periods such as during the Tang dynasty 618 907 and under the reformist CCP occurred

when its emphasis on scale the size of bureaucracy was balanced with scope diversity of ideas Considering China s remarkable success over the past half century Huang sees signs of danger in the political and economic reversals under Xi Jinping The CCP has again vaulted conformity above new ideas reverting to the Keju model that eventually led to technological decline It is a lesson from China s own history Huang argues that Chinese leaders would be wise to take seriously

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end-of-course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them

based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Culture and Sustainable Development in the City Sacha Kagan, 2022-08-05 This book exposes the potential to advance a cultural approach to sustainable urban development. It explores urban spaces of possibilities and links them to the seized or missed opportunities for innovative forms of transversal partnerships throughout the city and of culturally sensitive urban policies. The call for sustainability brings with it challenges for which, in view of the urgency of social transformation, institutional innovations are necessary. Sustainable urban development will only succeed through creative impulses, experiments, trying out innovative ideas and making alternatives visible in particular through locally rooted urban initiatives, artistic actions and social movements. Discussing many concrete examples from several years of empirical research in the cities of Hanover and Hamburg, Germany, Baltimore and Chicago, USA, Bangalore, India, St. Petersburg, Russia, Singapore and Vancouver, Canada, the book connects urban spaces and their actors, looks at their guiding principles, strategies and concrete practices, and identifies new levers, networks and alliances. Readers will find in this book not only inspiring examples of culture in everyday life in the city but also explanations about the qualities that make local cultural initiatives especially full of potentials and how they may translate into city-wide changes engaging with the whole City as Space of Possibilities. The book will interest researchers and advanced students in the interdisciplinary fields of urban studies, sustainability science, sustainability research, cultural sciences, urban sociology and sociology of the arts, cultural sociology and those interested in the transdisciplinary collaborations between the arts, academia and civil society.
