collection of distinct disease entities histotypes Until now the majority of research has focussed on the most common
histotype high grade serous ovarian carcinoma HGSOc which accounts for 70% of cases The less common histotypes
including endometrioid clear cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far
less research attention Accordingly while major advances in our understanding of HGSOc have led to molecularly directed
therapies that improve patient outcomes progress in less common histotypes has lagged behind Notably many of the
uncommon histotypes demonstrate resistance to conventional chemotherapy regimens and their inherent biological
differences suggest most are unlikely to respond to emerging molecular therapeutics designed to target the biology of
