Structural and Computational Glycobiology: Immunity and Infection Elizabeth Yuriev, Mark Agostino, 2015-08-04 Interest in understanding the biological role of carbohydrates has increased significantly over the last 20 years. The use of structural techniques to understand carbohydrate protein recognition is still a relatively young area but one that is of emerging importance. The high flexibility of carbohydrates significantly complicates the determination of high quality structures of their complexes with proteins. Specialized techniques are often required to understand the complexity of carbohydrate recognition by proteins. In this Research Topic we will focus on structural and computational approaches to understanding carbohydrate recognition by proteins involved in immunity and infection. Particular areas of focus include cancer immunotherapeutics carbohydrate lectin interactions glycosylation and glycosyltransferases.

Ballroom Biology: Recent Insights into Honey Bee Waggle Dance Communications Roger Schürch, Margaret J. Couvillon, Madeleine Beekman, 2016-03-02 The honey bee waggle dance communication is a complex unique at times controversial and ultimately fascinating behavior. In an elaborate figure of eight movement a returning forager conveys the distance and direction from the hive to resources usually the nectar and pollen that is their food and it remains one of the most sophisticated known forms of non human communication. Not surprisingly since its discovery more than 60 years ago by Karl von Frisch the dance has been subject to investigations that span from basic biology through human culture and neurophysiology to landscape ecology. Here we collate recent advances in our understanding of the dance.

CD1- and MR1-restricted T Cells in Antimicrobial Immunity S.M. Mansour Haeryfar, Thierry Mallevaey, 2016-01-21 Cell mediated immunity to extracellular and intracellular microbes has been traditionally linked to CD4 and CD8 T cells that recognize pathogen derived peptides in the context of major histocompatibility complex MHC class II and class I molecules respectively. Recent progress in our understanding of early host defense mechanisms has brought unconventional innate like T cells into the spotlight. These are a heterogeneous population of non MHC restricted T cells that exhibit memory like properties and mount emergency responses to infection. They may directly detect and destroy infected cells but are best known for their ability to regulate downstream effector cells including but not limited to conventional T cells. Innate like T cells include among others CD1 restricted natural killer T (NKT) cells and MR1 restricted mucosa associated invariant T (MAIT) cells. NKT cells recognize lipid antigens and MAIT cells were recently demonstrated to respond to microbe derived vitamin B metabolites. However much remains to be learned about the antigen specificity range of these cells their activation mode and their true potentials in immunotherapeutic applications. Like in many other areas of biology uncertainties and controversies surrounding these cells and some of the experimental models techniques and reagents employed to study them have brought about excitement and sometimes hot debates. This Special Topic was launched to provide updated reviews on protective and/or pathogenic roles of NKT and MAIT cells during infection. Leading experts discuss current controversies pressing questions and the challenges that lie ahead for the advancement of

this intriguing and rapidly evolving area of immunology Unlike MHC CD1 and MR1 display very limited polymorphism Therefore NKT and MAIT cells may be considered attractive targets for various diseases in diverse human populations The potential benefits of NKT cell and MAIT cell based vaccination and treatment strategies in infectious diseases is an important subject that is also covered in this Topic
