06biology Paper 62 2012 Mark Scheme:

Role of CD1- and MR1-restricted T cells in Immunity and Disease Kazuya Iwabuchi, Luc Van Kaer, 2019-10-18 CD1 and MR1 are major histocompatibility complex MHC class I related proteins that bind and present non peptide antigens to subsets of T cells with specialized functions CD1 proteins typically present lipid antigens to CD1 restricted T cells whereas MR1 presents vitamin B based ligands and a variety of drugs and drug like molecules to MR1 restricted T cells The CD1 family of antigen presenting molecules has been divided into two groups Group 1 contains CD1a CD1b and CD1c and Group 2 contains CD1d Additionally CD1e is expressed intracellularly and is involved in the loading of lipid antigens onto Group 1 CD1 proteins Humans express both Groups 1 and 2 CD1 proteins whereas mice only express CD1d Group 1 CD1 proteins present lipid antigens to T cells that generally express diverse T cell receptors TCRs and exhibit adaptive like functions whereas CD1d presents lipid antigens to subsets of T cells that express either diverse or highly restricted TCRs and exhibit innate like functions CD1d restricted T cells are called natural killer T NKT cells which includes Type I or invariant NKT iNKT cells expressing semi invariant TCRs and Type II NKT cells expressing more diverse TCRs CD1 restricted T cells have been implicated in a wide variety of diseases including cancer infections and autoimmune inflammatory and metabolic diseases Additionally NKT cells have been targeted for immunotherapy of disease with ligands such as galactosylceramide for iNKT cells or sulfatide for Type II NKT cells Like iNKT cells MR1 restricted T cells express semi invariant TCRs and display innate like functions MR1 restricted T cells also called mucosal associated invariant T MAIT cells have been implicated in immune responses against a variety of pathogens such as Mycobacterium tuberculosis Pseudomonas aeruginosa Helicobacter pylori hepatitis C virus and influenza virus Moreover these cells contribute to autoimmune and inflammatory diseases including colitis rheumatoid arthritis psoriasis lupus and diabetes

Molecular Dynamics of Plant Stress and its Management Muhammad Shahid, Rajarshi Gaur, 2024-06-25 This edited volume focuses on the study of stress in plants and how it can be effectively managed With the growing global population the importance of crop yield and stress management has become a critical issue and this book offers solutions to these challenges The book explores the impact of abiotic and biotic stressors on plant growth and development including drought salinity temperature stress pests and diseases It also examines the role of genetic engineering and biotechnology in developing stress tolerant plants It offers insights on the latest research and advancements in plant breeding genomics and proteomics which are essential in developing crops that can withstand harsh environmental conditions It offers solutions for managing these challenges including genetic engineering proteomics and genomics The book provides a detailed overview of the latest research and advancements in plant stress management and offers practical advice on how to apply these findings in real world scenarios It explores the impact of climate change on agricultural production and provides insights on how to develop stress tolerant crops that can withstand changing environmental conditions With its comprehensive coverage of the latest research and practical insights the book is an

invaluable guide for students researchers and professionals looking to develop sustainable agricultural practices and ensure food security for future generations

CD1- and MR1-restricted T Cells in Antimicrobial Immunity S.M. Mansour Haeryfar,Thierry Mallevaey,2016-01-21 Cell mediated immunity to extracellular and intracellular microbes has been traditionally linked to CD4 and CD8 T cells that recognize pathogen derived peptides in the context of major histocompatibility complex MHC class II and class I molecules respectively Recent progress in our understanding of early host defense mechanisms has brought unconventional innate like T cells into the spotlight These are a heterogeneous population of non MHC restricted T cells that exhibit memory like properties and mount emergency responses to infection They may directly detect and destroy infected cells but are best known for their ability to regulate downstream effector cells including but not limited to conventional T cells Innate like T cells include among others CD1 restricted natural killer T NKT cells and MR1 restricted mucosa associated invariant T MAIT cells NKT cells recognize lipid antigens and MAIT cells were recently demonstrated to respond to microbe derived vitamin B metabolites However much remains to be learned about the antigen specificity range of these cells their activation mode and their true potentials in immunotherapeutic applications Like in many other areas of biology uncertainties and controversies surrounding these cells and some of the experimental models techniques and reagents employed to study them have brought about excitement and sometimes hot debates This Special Topic was launched to provide updated reviews on protective and or pathogenic roles of NKT and MAIT cells during infection Leading experts discuss current controversies pressing questions and the challenges that lie ahead for the advancement of this intriguing and rapidly evolving area of immunology Unlike MHC CD1 and MR1 display very limited polymorphism Therefore NKT and MAIT cells may be considered attractive targets for various diseases in diverse human populations The potential benefits of NKT cell and MAIT cell based vaccination and treatment strategies in infectious diseases is an important subject that is also covered in this Topic

C-Reactive Protein in Age-Related Disorders Mark Slevin,Blanca Molins,2019-02-06 Over recent years native pentameric C reactive protein pCRP and its biologically active dissociated form monomer monomeric CRP mCRP have assumed an important role in disease development and pathophysiology In this series we have highlighted the thoughts and research of the most eminent scientists in the field of CRP research This eBook is a collection of original articles and reviews on the subject creating an archive of current knowledge and understanding This Research Topic provides new findings of the role of CRP in the fields of neuroscience cardiovascular disease inflammation and macular degeneration as well as defined links to stages in pathological disease progression These articles explain the mechanisms and pathways through which the dissociated mCRP interacts with a variety of cells and provide possible prognostic implications and new methods for analysis Over the coming years the importance and fascination of the active role of CRP in health and disease is set to rise and we hope this collection will serve as a valuable reference for these future investigations

Structural and Computational Glycobiology: Immunity and Infection Elizabeth Yuriev,Mark

Agostino,2015-08-04 Interest in understanding the biological role of carbohydrates has increased significantly over the last 20 years The use of structural techniques to understand carbohydrate protein recognition is still a relatively young area but one that is of emerging importance The high flexibility of carbohydrates significantly complicates the determination of high quality structures of their complexes with proteins Specialized techniques are often required to understand the complexity of carbohydrate recognition by proteins In this Research Topic we will focus on structural and computational approaches to understanding carbohydrate recognition by proteins involved in immunity and infection Particular areas of focus include cancer immunotherapeutics carbohydrate lectin interactions glycosylation and glycosyltransferases *Biologically-informed approaches to design processes and applications* Mark A. Elgar,Cecilia Laschi,Devi Stuart-Fox,Alberto Pugnale,Ahu Gumrah Dumanli-Parry,2023-03-28 **Methods and Paradigms in Education Research** Ling, Lorraine,Ling, Peter,2016-10-31

The tools used in data collection have the ability to influence the ways information is perceived and generated Analyzing research processes is a concept that can be overlooked though is as important as the information itself Methods and Paradigms in Education Research addresses the innovative formulaic approaches taken in research to challenge their effectiveness Featuring coverage on selection forms and analytical procedures of data this publication is essential for researchers students and academicians seeking current information on understanding research methodology

Chemoinformatics Approaches to Structure- and Ligand-Based Drug Design Adriano D. Andricopulo,Leonardo L. G. Ferreira,2019-02-05 Chemoinformatics is paramount to current drug discovery Structure and ligand based drug design strategies have been used to uncover hidden patterns in large amounts of data and to disclose the molecular aspects underlying ligand receptor interactions This Research Topic aims to share with a broad audience the most recent trends in the use of chemoinformatics in drug design To that end experts in all areas of drug discovery have made their knowledge available through a series of articles that report state of the art approaches Readers are provided with outstanding contributions focusing on a wide variety of topics which will be of great value to those interested in the many different and exciting facets of drug design *Habitat and Distribution Models of Marine and Estuarine Species: Advances for a Sustainable Future* Mary C. Fabrizio,Mark J. Henderson,Kenneth Alan Rose,Pierre Petitgas,2022-11-23 The British National Bibliography Arthur James Wells,1963 *Research Model Innovations in Advancing Neonatal Care* Fook-Choe Cheah,Geok Chin Tan,Yuan Shi,2021-08-09 Origin and Early Evolution of Amniotes Jörg Fröbisch,Mark Joseph MacDougall,Michel Laurin,Sean P. Modesto, Robert R. Reisz,2025-09-08 Amniotes comprise all fully terrestrial vertebrates and include extant squamates turtles crocodiles birds and mammals The origin of amniotes tightly linked to the amniotic egg as a key innovation represents a major transition in the evolutionary history of tetrapods Amniotes first appeared in the fossil record about 318 million years ago and their early evolution diversification ecology and phylogenetic relationships have received considerable and increasing interest and research attention over the past decades Recently several new hypotheses

regarding early amniote interrelationships have been proposed and it is now apparent that the origin and early evolution of Amniota is not as clear as was previously thought In order to better understand early amniote evolution and test existing hypotheses it is critical to continue expanding upon past work with the addition of new data and application of modern technologies and approaches

Spacematrix Meta Berghauser Pont, Per Haupt, 2023-05-23 Spacematrix explores the potential of urban density as a tool for urban planning and design This revised and extended edition of Meta Berghauser Pont and Per Haupt's 2010 volume includes an extensive analysis of the relations between density urban form and performance a prerequisite for understanding and successfully predicting the effects of specific designs and planning proposals The density database that is an integral part of the book has been expanded and now includes 142 examples from five capitals in Europe as well as examples from Asia Berghauser Pont and Haupt demystify the use of concepts such as urbanity compact city and park city by challenging the reliability of such concepts and critically examining the possibility of redefining them through quantification using multiple density measures Spacematrix is of interest to professionals working in the field of urbanism such as architects urban planners and designers as well as developers economists engineers and policymakers It also offers researchers a method to quantitatively describe urban form and connect this to a wide range of performances
