High Performance Computing in Science and Engineering '09 Wolfgang E. Nagel, 2010-04-28 At the end of the year 2008 we have seen a strategic step towards a functioning HPC infrastructure on Tier 0 level in Germany Based on an agreement Verwaltungsabkommen between the Federal Ministry of Education and Research BMBF and the state ministries for research of Baden Württemberg Bayern and Nordrhein Westfalen a budget of overall 400 Million Euro had been allocated equally shared between federal and state authorities in a five year time frame to establish the next generation of HPC systems at the Gauss Centre for Supercomputing GCS consisting of the three national supercomputing centres HLRS Stuttgart NIC JSC Jülich and LRZ Munich As part of that strategic initiative in May 2009 already NIC JSC has installed the first phase of the GCS HPC Tier 0 resources an IBM Blue Gene P with roughly 300 000 Cores this time in Jülich With that the GCS provides the most powerful high performance computing infrastructure in Europe already today HLRS and its partners in the GCS have agreed on a common strategy for the installation of the next generation of leading edge HPC systems Over the next few years HLRS and LRZ as the other two GCS centers will upgrade their systems accordingly The plan is to have a Tier 0 HPC system within GCS operating at any time in this five year period As an intermediate step HLRS has replaced most of their NEC SX 8 nodes by the NEC SX 9 12M192 a system with roughly 20 TFLOPs peak

laboratory and field tests for structure protections **The United States Catalog** ,1909 Analysis of the mechanical response of impact loaded composite sandwich structures with focus on foam core shear failure Tim Berend Block,2014

Sandwich structures are an economically and structurally efficient way of designing large integral composite parts In the aerospace industry pre impregnated face sheets and honeycomb core structures can be considered as industry standard while e g naval structures and wind turbine blades typically use vacuum infusion technology with polymer foam cores Application of the less costly infusion technology in the aeronautical industry requires a thorough understanding of the damage tolerance including low velocity impact as a frequent source of damaging events At low impact energies damage in composite foam core sandwich structures is limited to core crushing and local face sheet delaminations Higher impact energies may initiate the competing failure modes face sheet rupture and core shear failure depending on impact geometric and material parameters Face sheet rupture leads to severe local damage with typically good visibility while core shear failure leads to cracks and rear face sheet debonding of the foam core with less visibility This work investigates the low velocity impact response of sandwich structures with carbon fiber reinforced plastic CFRP face sheets and a polymeric foam core using experiments at room temperature and at 55 Celsius An analytically derived failure mode map is presented as a simple tool for design guidelines while the explicit finite element method is applied for a more detailed description of the sandwich impact process Both models are used to analyze the impact response and describe relevant sensitivity parameters of sandwich structures *Advances in Heterogeneous Material Mechanics 2011* Jinghong Fan,2011 Technical Abstract Bulletin Defense Documentation Center (U.S.),1964 **Patient-Specific Computational Modeling** Begoña Calvo Lopez,Estefanía Peña,2012-05-20 This book addresses patient specific modeling It integrates computational modeling experimental procedures image clinical segmentation and mesh generation with the finite element method FEM to solve problems in computational biomedicine and bioengineering Specific areas of interest include cardiovascular problems ocular and muscular systems and soft tissue modeling Patient specific modeling has been the subject of serious research over the last seven years and interest in the area is continually growing and this area is expected to further develop in the near future
