Week 11 Case Studies: Gastroenterology disorders

Review of the gastrointestinal tract:

- 1) Briefly discuss the functions of the organs within the gastrointestinal tract: mouth, esophagus, stomach, small intestine, and large intestine. [slides 2-5]

Mouth: eating and speaking Esophagus: a transport tube that directs the progression of food and fluids from the mouth to the stomach Stomach: store food and release it to the intestines at a rate so the intestines can process it. The stomach mixes food to prep it for digestion Small intestine: breaks down food from the stomach and absorbs much of the nutrients from the food Large intestine: absorb water and salts from the material that has not been digested as food and get rid of any waste products left over

- 2) What is the main function of the pancreas and liver in relation to the GI tract?

The liver digests food by producing bile to break down fats, removing toxins and breaking down and storing vitamins and minerals. The pancreas produces enzymes to help break down proteins, fats, and carbohydrates.
