Hepatitis C Virus: The Next Epidemic, An issue of Gastroenterology Clinics of North America K. Rajender Reddy, 2016-01-07 There are over 180 million people with chronic HCV infection worldwide with between 2.7 and 3.9 million in the United States Hepatitis C most significantly affects Asia and Africa with rates up to 15% in countries such as Egypt and up to 30% in certain regions such as Punjab Pakistan Hepatitis C places a significant burden on the public health infrastructure as it remains the leading cause of chronic liver disease accounting for 50-75% of primary liver cancers and is responsible for 30% of all liver transplantations It is estimated to have cost the United States 5.5 billion in 1997 comparable to the national cost of asthma 5.8 billion in 1994 This number is only expected to grow as the current HCV population ages increasing overall rates of compensated cirrhosis end stage liver disease The evolution of directly acting anti virals has

ushered in a new era for chronic hepatitis C Ongoing drug development strategy has involved targeting several replication steps of the virus and the hope is to see all oral therapies by late 2014 or early 2015 Thus we are at an exciting cross roads with regard to new information and challenges with HCV rising disease burden with associated high costs the challenges globally and in multiple patient populations and the impending availability of effective and well tolerated treatments

Therefore there is a need to commission an exclusive issue of GCNA for HCV *Innovative Drug Synthesis* Jie Jack Li, Douglas S. Johnson, 2015-12-14 This book covers all aspects of the medicinal chemistry of the latest drugs and the cutting edge science associated with them Following the editors 3 successful drug synthesis books this provides expert analysis of the pros and cons of different synthetic routes and demystifies the process of modern drug discovery for practitioners and researchers Summarizes for each drug respective disease area important properties and SAR structure activity relationship and chemical synthesis routes options Includes case studies in each chapter Illustrates how chemistry biology pharmacokinetics and a host of disciplines come together to produce successful medicines Explains the advantages of process synthesis versus the synthetic route for drug discovery **Inhibitors of Protein-Protein Interactions** Ali

Tavassoli, 2020-11-25 Protein protein interactions PPI are at the heart of the majority of cellular processes and are frequently dysregulated or usurped in disease Given this central role the inhibition of PPIs has been of significant interest as a means of treating a wide variety of diseases However there are inherent challenges in developing molecules capable of disrupting the relatively featureless and large interfacial areas involved Despite this there have been a number of successes in this field in recent years using both traditional drug discovery approaches and innovative interdisciplinary strategies using novel chemical scaffolds This book comprehensively covers the various aspects of PPI inhibition encompassing small molecules peptidomimetics cyclic peptides stapled peptides and macrocycles Illustrated throughout with successful case studies this book provides a holistic cutting edge view of the subject area and is ideal for chemical biologists and medicinal chemists interested in developing PPI inhibitors

Childs, 2016-06-02 In this innovative title the authors describe unique patient populations affected by stigma and prejudice and the prevalence of these issues to all healthcare providers Each chapter covers the forms of prejudice and stigma associated with minority statuses including religious minorities the homeless as well as those stigmatized by medical serious medical conditions such HIV AIDS obesity and substance misuse disorders The chapters focus on the importance of recognizing biological differences and similarities within such groups and describes the challenges and best practices for optimum healthcare outcomes The text describes innovative ways to connect in a clinical setting with people of diverse backgrounds The text also covers future directions and areas of research and innovative clinical work being done Written by experts in the field *Stigma and Prejudice* is an excellent resource for psychiatrist psychologists general physicians social workers and all other medical professionals working with stigmatized populations **Petrochronology**

Matthew J. Kohn, Martin Engi, Pierre Lanari, 2019-11-05 Petrochronology is a rapidly emerging branch of Earth science that links time ages or rates with specific rock forming processes and their physical conditions It is founded in petrology and geochemistry which define a petrogenetic context or delimit a specific process to which chronometric data are then linked This combination informs Earth's petrogenetic processes better than petrology or geochronology alone This volume and the accompanying short courses address three broad categories of inquiry Conceptual approaches chapters include petrologic modeling of multi component chemical and mineralogic systems and development of methods that include diffusive alteration of mineral chemistry Methods chapters address four main analytical techniques specifically EPMA LA ICP MS SIMS and TIMS Mineral specific chapters explore applications to a wide range of minerals including zircon metamorphic igneous and detrital Hadean baddeleyite REE minerals monazite allanite xenotime and apatite titanite rutile garnet and major igneous minerals olivine plagioclase and pyroxenes These applications mainly focus on metamorphic igneous or tectonic processes but additionally elucidate fundamental transdisciplinary progress in addressing mechanisms of crystal growth the chemical consequences of mineral growth kinetics and how chemical transport and deformation affect chemically complex mineral composites Most chapters further recommend areas of future research Understanding Parkinsonism Deepti Vibha, Amit Batla, 2018-07-31 Parkinsonism is a clinical syndrome characterised by tremor bradykinesia rigidity and postural instability Parkinsonism shares symptoms found in Parkinson's Disease from which it is named but parkinsonism is a symptom complex and differs from Parkinson's disease which is a progressive neurodegenerative illness This book is a guide to Parkinsonism for practising neurologists Beginning with an overview of the condition the next chapters discuss the differences between Parkinsonism and Parkinson's Disease The following sections cover the diagnosis and treatment of various disorders associated with Parkinsonism and both early and advanced Parkinson's Disease A complete chapter is dedicated to the use of

Botulinum Toxin Botox in the management of Parkinsonism Each chapter is supplemented by clinical cases to assist understanding of the complex condition Edited by recognised experts in the field the book is further enhanced by clinical photographs and illustrations Key points Guide to Parkinsonism detailing differences between the condition and Parkinson s Disease Covers diagnosis and treatment of disorders associated with both conditions Includes chapter on use of Botulinum Toxin Botox in the management of Parkinsonism Each chapter features clinical cases to assist understanding **Recent Advances in Crustacean Endocrinology** Haihui Ye, Marcy N. Alteration in adequate energy balance maintenance results in serious disturbances such as obesity and its related metabolic disorders In Mammals energy balance is homeostatically controlled through hormonal and neuroendocrine systems which cooperation is based on cross talk between central and peripheral signals The hypothalamus as well as peripheral hormones among which adipokines from adipose tissue and thyroid hormones play a crucial role in energy homeostasis Unraveling the

physiological cellular and molecular mechanisms through which hormonal and neuroendocrine systems regulate energy balance has been a long standing challenge in biology and is now more necessary when considering the world wide increasing prevalence of obesity Indeed recognizing and understanding the biochemical and nutrient signaling pathways contributing to the nervous and endocrine integration of physiological mechanisms involved in the normal and or abnormal regulation of energy balance is fundamental also to the development of new effective and targeted treatments for obesity Recent studies have highlighted the role of hypothalamic pro opiomelanocortin expressing neurons in the regulation of energy homeostasis by controlling energy expenditure and food intake This is accomplished through a precise balance of production and degradation of a melanocyte stimulating hormone an anorexigenic neuropeptide which is degraded to an inactive form unable to inhibit food intake by the key enzyme prolyl carboxypeptidase PRCP thus suggesting that pharmacologic approaches targeting PRCP may provide a novel and effective option for the management of obesity and its associated metabolic disorders Indeed efforts have been made to generate potent brain penetrant PRCP inhibitors Weight loss due to negative energy balance is a goal for obese subjects not always reachable by dietary caloric restriction or increased physical activity Lipid lowering therapies have been suggested to have potential benefits however the establishment of comprehensive therapeutic strategies is still awaited Recently it has been reported that thyroid hormone TH derivatives such as 3 5 diiodothyronine and 3 iodothyronamine possess interesting biological activities opening new perspectives in thyroid physiology and TH derivatives therapeutic usage Moreover several studies focusing on the interaction between thyroid hormone TH the autonomic nervous system and the liver revealed an important role for the hypothalamus in the differential effects of TH on autonomic outflow to peripheral organs controlling energy balance This Research Topic aims to give a comprehensive and integrate view of the factors involved in the endocrine and neuroendocrine signaling in energy balance regulation to highlight their involvement into physiological processes and regulatory systems as well as their perturbation during pathological processes

Reproduction and Early Development Rafael A. Fissore, Adam Burton, Karin Lykke-Hartmann, 2019-08-20 The Research Topic aims to support progress towards understanding the different sets of developmental processes that are absolutely required to complete all the steps essential for successful embryonic development under physiological conditions We sought contributions that dealt with single cells interaction between cells as well as intra and extracellular signal transduction The Research Topic presents original studies covering experimental and theoretical approaches descriptions of new methodologies reviews and opinions

Functional Relevance of Tetraspanins in the Immune System

Carlos Cabañas, María Yáñez-Mó, Annemiek B. van Spriel, 2019-10-09 Tetraspanins are small 20 50 kDa integral membrane proteins with four transmembrane domains that have an intrinsic propensity to associate with other membrane proteins and lipids

giving rise to the formation of specific tetraspanin enriched microdomains TEMs also referred to as The tetraspanin web In mammals the tetraspanin family comprises of 33 different members with the majority of the members being abundantly expressed in almost all cell types including leukocytes which are responsible for innate and adaptive immunity as well as in other cells that play pivotal roles in immune responses such as endothelial or stromal cells Therefore through the wide range of specific molecular interactions in which they are engaged tetraspanins influence many processes of up most relevance in the development physiology and pathology of the immune system including the control of immune cell morphology signaling adhesion migration invasion fusion infections and cancer
