

MARK SCHEME for the May/June 2014 series

0620 CHEMISTRY

0620/63

Paper 6 (Alternative to Practical), maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Beneficial Microbes Alleviate Climatic Stresses in Plants Ying Ma, Miroslav Vosátka, Helena Freitas, 2019-07-30 This Research Topic addresses the mechanisms by which beneficial soil microbes such as fungi and bacteria protect their host plant from climatic stresses that are increasing due to climate change We will highlight 1 recent progress in fundamental research 2 applied studies aimed at promoting sustainable agriculture and environmental remediation and 3 emerging biotechnologies that promote crop adaptation to climate change Plants respond to various climatic stresses such as drought salinity elevated CO₂ and extreme temperatures These responses

induce changes at the molecular cellular and physiological levels that restrict the establishment growth and development of the plant Understanding these changes has become an important research goal due to concerns about the adverse effects of climatic stresses on agriculture sustainability global food security and even plant based remediation technologies Some beneficial soil microorganisms such as arbuscular mycorrhizal fungi and plant growth promoting bacteria are able to protect and promote the growth of their host plants by acting as bioprotectants via induced systemic resistance biopesticides via antibiotic functions and phytostimulators via triggering hormonal signaling networks Plant adaptation to various climatic stresses is dynamic and involves complex cross talk within the regulatory network e g transcription factors kinase cascades and signaling molecules However the detailed molecular cellular and physiological mechanisms underlying plant beneficial microbe interactions in climatic stress adaptation remain largely unknown Expenditures for Scientific and Engineering Activities at Universities and Colleges National Science Foundation (U.S.).
