Spiral Bevel Pinion Crack Detection in a Helicopter Gearbox, 2003 The vibration resulting from a cracked spiral bevel pinion was recorded and analyzed using existing Health and Usage Monitoring System HUMS techniques A tooth on the input pinion to a Bell OH 58 main rotor gearbox was notched and run for an extended period at severe over torque condition to facilitate a tooth fracture Thirteen vibration based diagnostic metrics were calculated throughout the run After 101 41 hours of run time some of the metrics indicated damage At that point a visual inspection did not reveal any damage The pinion was then run for another 12 minutes until a proximity probe indicated that a tooth had fractured This paper discusses the damage detection effectiveness of the different metrics and a comparison of effects of the different accelerometer locations Technical Manual United States. Dynamics and Vibration Analyses of Gearbox in Wind Turbine Qingkai Han, Jing Wei, Qingpeng Han, Hao Zhang, 2016-09-27 This book explores the dynamics and vibration properties of gearboxes with a focus on geared rotor systems It discusses mechanical theories finite element based simulations experimental measurements and vibration signal processing techniques It introduces the vibration resonance calculation method for the geared rotor system in wind turbines and load sharing of the planetary gear train and offers a method for calculating the vibrations of geared rotor systems under either internal excitations from gear sets or external loads transferred from wind loads It also defines and elaborates on parameter optimization for planetary gear systems based on the torsional dynamics of wind turbine geared rotor systems Moreover it describes experimental measurements of vibrations on the wind turbine gearbox performed on the test rig and

on site and analyzes the vibration signals of different testing points showing them in both time and frequency domains Lastly it lists the gear coupling frequencies and fault characteristic frequencies from the vibrations of the gearbox housing The technologies and results presented are valuable resources for use in dynamic design vibration prediction and analysis of gearboxes and geared rotor systems in wind turbines as well as many other machines
