Behavioural Responses to a Changing World Bob B. M. Wong, Ulrika Candolin, 2025-04-23 For many animals behavioural adjustments represent the first response to human modified conditions By improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change Behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before Clearly behaviour matters But how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a Changing World Challenges and Applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains

underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world The State of the World's Biodiversity for Food and Agriculture Food and Agriculture Organization of the United Nations,2019-03-12 The State of the World s Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide Biodiversity for food and agriculture is the diversity of plants animals and micro organisms at genetic species and ecosystem levels present in and around crop livestock forest and aquatic production systems It is essential to the structure functions and processes of these systems to livelihoods and food security and to the supply of a wide range of ecosystem services It has been managed or influenced by farmers livestock keepers forest dwellers fish farmers and fisherfolk for hundreds of generations Prepared through a participatory country driven process the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture the drivers of change affecting it and its current status and trends It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture including through the development of supporting policies legal frameworks institutions and capacities It concludes with a discussion of needs and challenges in the future management of biodiversity for food and agriculture The report complements other global assessments prepared under the auspices of the Commission on Genetic Resources for Food and Agriculture which have focused on the state of genetic resources within particular sectors of food and agriculture
