Mendelian/Human Genetics

Introduction

Gregor Mendel is often considered the “father” of modern genetic analysis. His pioneering work with garden peas provided the evidence from which he deduced the primary modes of inheritance of individual genes, often called “Mendelian Genetics.” The primary hypotheses/ideas Mendel described are as follows:

- Genes exist in pairs in diploid organisms
 - The genes can contain different information called alleles (for example, an eye color gene may contain either a brown-eye allele or a blue-eye allele)
 - Of these allele pairs, some alleles are dominant and some are recessive
 - Alleles for the same gene segregate independently of each other during meiosis (this is Mendel’s **law of segregation**)
- When following the inheritance of the alleles of two different genes (for example, eye color and height), Mendel devised the **law of independent assortment**:
 - Alleles for different genes segregate independently of each other during meiosis

The study of genetics relies on a significant amount of vocabulary, and in order to understand and apply genetic principles, a detailed understanding of this vocabulary is required.

- Useful genetics vocabulary includes
 - Homozygous and heterozygous
 - Genotype and phenotype
 - Monohybrid and dihybrid crosses
 - Testcross

In addition, the use of the principles of simple probability can provide an extensive amount of information on how different traits are inherited. Comprehending genetics involves a basic understanding and appreciation of how genes regulate our various traits (dimples, hair color, blood types, for example). The **goal** of this lab is to provide a “**genetics sampler**” or **relatively simple introduction to heredity using common human traits**.

Learning Objectives

1. To define some genetic terms: allele, dominant, recessive, genotype, phenotype, heterozygous, and homozygous.
2. To gain practice working simple genetics problems, using a Punnett square.
3. To observe selected human phenotypes and determine their genotypes.

Materials

- PTC (phenylthiocarbamide) taste strips
- Sodium benzoate taste strips
- Chart for tabulation of class results of human phenotype/genotype determination.
- Blood typing supplies
 - Anti-A and Anti-B sera, slides, toothpicks, sterile lancet, wax pencils, alcohol swabs
 - Beaker containing 10% bleach solution
 - Disposable waste bags

Genetics Laboratory Exercises Eldon John Gardner, 1956 *Laboratory Exercises in Microbiology* Robert A. Pollack, Lorraine Findlay, Walter Mondschein, R. Ronald Modesto, 2018-07-11 The *Laboratory Exercises in Microbiology* 5e by Pollack et al presents exercises and experiments covered in a 1 or 2 semester undergraduate microbiology laboratory course for allied health students. The labs are introduced in a clear and concise manner while maintaining a student friendly tone. The manual contains a variety of interactive activities and experiments that teach students the basic concepts of microbiology. The 5th edition contains new and updated labs that cover a wide array of topics including identification of microbes, microbial biochemistry, medical microbiology, food microbiology, and environmental microbiology. *Genetics Laboratory Exercises* John Kuspira, George William Rutherford Walker, 1962 *Laboratory Exercises in Genetics* Louis Levine, Norman M. Schwartz, 1973 **Plant Pathology Concepts and Laboratory Exercises** Robert N. Trigiano, 2007-11-30 Revised and updated with new concepts, case studies, and laboratory exercises. *Plant Pathology Concepts and Laboratory Exercises* Second Edition supplies highly detailed and accurate information in a well organized and accessible format. New additions to the second edition include five new topic and exercise chapters on soilborne pathogens, molecular tools, biocontrol, and plant fungal interactions; information on in vitro pathology; an appendix on plant pathology careers; and how to use and care for the microscope. An accompanying CD-ROM contains figures from the text as well as supplemental full color photos and PowerPoint slides. Unique Learning Tools: Retaining the informal style of the previous edition, this volume begins each topic with a concept box to highlight important ideas. Several laboratory exercises support each topic and cater to a wide range of skill sets from basic to complex. Procedure boxes for the experimental exercises give detailed outlines and comments on the experiments; step by step instruction; anticipated results; and thought provoking questions. Case studies of specific diseases and processes are presented as a bulleted list supplying essential information at a glance. Comprehensive Coverage: Divided into six primary parts, this valuable reference introduces basic concepts of plant pathology with historical perspectives; fundamental ideas of disease and disease relationships with the environment. It details various disease causing organisms including viruses, prokaryotic organisms, plant parasitic nematodes, fungi, plant parasitic seed plants, and other biotic and abiotic diseases. Exploring various plant pathogen interactions including treatments of molecular attack strategies, extracellular enzymes, host defenses, and disruption of plant function, the book presents the basic ideas of epidemiology, control strategies, and disease diagnosis. *Laboratory Exercises in Plant Pathology: An Instructional Kit (Teachers Manual)* A.B.A.M. Baudoin, 2011-01-13 The Teacher's manual contains information designed to facilitate use of this kit by instructors and teaching assistants who may not be familiar with a particular plant pathogen system. Included are additional background information for instructors, sources of materials, list of materials needed, step wise preparation, procedures suggested, schedules for conducting the exercises including time required, a discussion of expected results, answer

to questions and additional references The listing of sources of material provided in case material is not available from a local source or regular supplier
