The Car Book 2007 Jack Gillis, Amy Curran, David Iberkleid, 2007 **Electrical Measuring Instruments and Measurements** S.C. Bhargava, 2012-12-27 This book written for the benefit of engineering students and practicing engineers alike is the culmination of the author's four decades of experience related to the subject of electrical measurements comprising nearly 30 years of experimental research and more than 15 years of teaching at several engineering institutions. The unique feature of this book apart from covering the syllabi of various universities is the style of presentation of all important aspects and features of electrical measurements with neatly and clearly drawn figures, diagrams and colour and b/w photos that illustrate details of instruments among other things making the text easy to follow and comprehend. Enhancing the chapters are interspersed explanatory comments and where necessary footnotes to help better understanding of the chapter contents. Also each chapter begins with a recall to link the subject matter with the related science or phenomenon and fundamental background. The first few chapters of the book comprise Units, Dimensions and Standards, Electricity, Magnetism and Electromagnetism and Network Analysis. These topics form the basics of electrical measurements and provide a better understanding of the main topics discussed in later chapters. The last two chapters represent valuable assets of the book and relate to a Magnetic Measurements describing many unique features not easily available elsewhere, a good study of which is essential for the design and development of most electric equipment from motors to transformers and alternators and b) Measurement of Non electrical Quantities dealing extensively with the measuring techniques of a number of variables that constitute an important requirement of engineering measurement practices. The book is supplemented by ten appendices covering various aspects dealing with the art and science of electrical measurement and of relevance to some of the topics in main chapters. Other useful features of the book include an elaborate chapter by chapter list of symbols, worked examples, exercises and quiz questions at the end of each chapter and extensive authors and subject index. This book will be of interest to all students taking courses in electrical measurements as a part of a B.Tech in electrical engineering. Professionals in the field of electrical engineering will also find the book of use. *Maritime Engineering and Technology* Carlos Guedes Soares, Y. Garbatov, S. Sutulo, T.A. Santos, 2012-11-26 *Maritime Engineering and Technology* includes the papers from the 1st International Conference on Maritime Technology and Engineering MARTECH 2011 Lisbon Portugal 10-12 May 2011. MARTECH 2011 was held to commemorate 100 years of the Instituto Superior Técnico IST in Lisbon and the contributions in the present volume reflect the Developing University Social Responsibility Keikoh Ryu, 2021-09-07 This book analyzes the growing importance of information disclosure in Japanese universities in the context of the country's changing circumstances from both a macroscopic and microscopic perspective with a focus on the concept of universities as organizations. This macroscopic analysis is based on available data concerning the various information disclosure practices of Japanese universities and includes a discussion of their strengths and weaknesses. As for the

microscopic analysis questionnaires and various other quantitative methods have been used to study overall satisfaction with the level of disclosure among students and teachers in public and private universities including differences between Japanese and Chinese students. The results of these surveys have then been analyzed to identify the main factors informing students' views on the subject. Finally, additional insight into the practice of information disclosure in Japanese universities has been provided in a series of representative case studies which should help promote further study concerning the practical applications of such disclosure. Based on the above analysis, this book proposes a social responsibility based approach to university information disclosure which incorporates stakeholder theory based identification of public information content and an underlying focus on disclosure as a means to realize universities' social responsibilities. Identification of the types of information that universities should seek to disclose, recommendations for developing a framework for the systematic disclosure of such information, and recent disclosure trends. As part of this approach, recommendations concerning the arrangement of different sources of information, thoughts on building a publicly accessible platform for sharing university information, and key points underlying the systematic disclosure of information within universities are also proposed. Finally, this book is helpful in identifying further areas of research including but not necessarily limited to the ideas and legal principles underlying the construction of a university information disclosure system, the development of information disclosure systems based on social responsibility, and the development of various standards for the disclosure of information. The ideal approach would ensure that all stakeholders are provided with meaningful access to relevant information and that transparency takes precedence over any competing considerations as part of an overriding effort to improve university administration and oversight.
