Hale,2012-12-06 Since the publication of my lecture notes Functional Differential Equations in the Applied Mathematical Sciences series many new developments have occurred As a consequence it was decided not to make a few corrections and additions for a second edition of those notes but to present a more comprehensive theory The present work attempts to consolidate those elements of the theory which have stabilized and also to include recent directions of research The following chapters were not discussed in my original notes Chapter 1 is an elementary presentation of linear differential difference equations with constant coefficients of retarded and neutral type Chapter 4 develops the recent theory of dissipative systems Chapter 9 is a new chapter on perturbed systems Chapter 11 is a new presentation incorporating recent results on the existence of periodic solutions of autonomous equations Chapter 12 is devoted entirely to neutral equations Chapter 13 gives an introduction to the global and generic theory There is also an appendix on the location of the zeros of characteristic polynomials The remainder of the

material has been completely revised and updated with the most significant changes occurring in Chapter 3 on the properties of solutions Chapter 5 on stability and Chapter 10 on behavior near a periodic orbit

Methods of Geometric Analysis in Extension and Trace Problems Alexander Brudnyi, Prof. Yuri Brudnyi Technion R&D Foundation Ltd, 2011-10-07 The book presents a comprehensive exposition of extension results for maps between different geometric objects and of extension trace results for smooth functions on subsets with no a priori differential structure Whitney problems The account covers development of the area from the initial classical works of the first half of the 20th century to the flourishing period of the last decade Seemingly very specific these problems have been from the very beginning a powerful source of ideas concepts and methods that essentially influenced and in some cases even transformed considerable areas of analysis Aside from the material linked by the aforementioned problems the book also is unified by geometric analysis approach used in the proofs of basic results This requires a variety of geometric tools from convex and combinatorial geometry to geometry of metric space theory to Riemannian and coarse geometry and more The necessary facts are

presented mostly with detailed proofs to make the book accessible to a wide audience
