The butterflyfishes: success on the coral reef
Philip J. Motta, 2012-12-06. Butterflyfishes of the family Chaetodontidae are conspicuous members of almost all tropical reefs. These colorful fishes have attracted a great deal of attention from both the scientific community and especially the aquarium fish industry. At first, one is tempted to say that butterflyfishes are abundant worldwide, but the evidence does not support this statement. The biomass of chaetodontids on reefs may range from 0.02 to 0.80% and in terms of numbers they comprise only 0.04 to 0.61% of the individuals on the reef. Yet in spite of these relatively small numbers, they have been extensively studied. A quick census shows some 170 articles on or about butterfly fishes, with 78% of them being published since the 1970s. Along with the cichlids and damselfishes, they might be one of the most studied and well published families of tropical fishes. Why then have chaetodontids attracted so much attention? The butterflyfishes are mostly shallow water inhabitants that are approachable and easily recognizable, making their study very feasible. Their bright coloration has provoked many hypotheses but has posed more questions about coloration than it has provided answers. And despite their apparent overall morphological similarity, their highly structured and varied social systems have made them an ideal model for such studies. The reasons for choosing these organisms are indeed as diverse as the studies themselves.

Theoretical Foundations of Artificial General Intelligence
Pei Wang, Ben Goertzel, 2012-08-31. This book is a collection of writings by active researchers in the field of Artificial General Intelligence on topics of central importance in the field. Each chapter focuses on one theoretical problem, proposes a novel solution, and is written in sufficiently non-technical language to be understandable by advanced undergraduates or scientists in allied fields. This book is the very first collection in the field of Artificial General Intelligence (AGI) focusing on theoretical, conceptual, and philosophical issues in the creation of thinking machines. All the authors are researchers actively developing AGI projects, thus distinguishing the book from much of the theoretical, cognitive science, and AI literature which is generally quite divorced from practical AGI system building issues. And the discussions are presented in a way that makes the problems and proposed solutions understandable to a wide readership of non-specialists, providing a distinction from the journal and conference proceedings literature. The book will benefit AGI researchers and students by giving them a solid orientation in the conceptual foundations of the field, which is not currently available anywhere, and it would benefit researchers in allied fields by giving them a high level view of the current state of thinking in the AGI field. Furthermore, by addressing key topics in the field in a coherent way, the collection as a whole may play an important role in

guiding future research in both theoretical and practical AGI and in linking AGI research with work in allied disciplines
