Mathematics and Transition to School Bob Perry, Amy MacDonald, Ann Gervasoni, 2015-01-09 This edited book brings together for the first time an international collection of work focused on two important aspects of any young child's life learning mathematics and starting primary or elementary school The chapters take a variety of perspectives and integrate these two components in sometimes explicit and sometimes more subtle ways The key issues and themes explored in this book are the mathematical and other strengths that all participants in the transition to school bring to this period of a child's life the opportunities provided by transition to school for young children's mathematics learning the importance of partnerships among adults and among adults and children for effective school transitions and mathematics learning and teaching the critical impact of expectations on their mathematics learning as children start school the importance of providing children with meaningful challenging and relevant mathematical experiences throughout transition to school the entitlement of children and educators to experience assessment and instructional pedagogies that match the strengths of the learners and the teachers the importance for the aspirations of children families communities educators and educational organisations to be recognised as legitimate and key determinants of actions experiences and successes in both transition to school and mathematics learning and the belief that young children are powerful mathematics learners who can demonstrate this power as they start school In each chapter authors reflect on their work in the area of mathematics and transition to school place that work within the overall context of research in these fields predict the trajectory of this work in the future and consider the implications of the work both theoretically and practically

Agents and Artificial Intelligence Jaap van den Herik, Ana Paula Rocha, Luc Steels, 2019-12-14 This book contains the revised and extended versions of selected papers from the 11th International Conference on Agents and Artificial Intelligence ICAART 2019 held in Prague Czech Republic in February 2019 Overall 46 full papers 66 short papers and 36 poster papers were carefully reviewed and selected from 202 initial submissions 17 of the 46 full papers were selected to be included in this volume These papers deal with topics such as natural language processing artificial intelligence and agents

Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von
 Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical
 abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge
 societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we
 are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very
 restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also
 informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities
 in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has
 gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross
 cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies
 develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of
 developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of
 how numerical competencies develop and how this development is associated with neural changes as well In the end this
 knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has
 grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this
 Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural
 substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included
 empirical contributions using different experimental methodologies but also theoretical contributions review articles or
 opinion papers **Collected Papers in Honor of Yoshihiro Shibata** Tohru Ozawa, 2022-11-30 Yoshihiro Shibata has made
 many significant contributions to the area of mathematical fluid mechanics over the course of his illustrious career including

landmark work on the Navier Stokes equations The papers collected here on the occasion of his 70th birthday are written by world renowned researchers and celebrate his decades of outstanding achievements Learning and Intelligent Optimization Panos M. Pardalos, Mauricio G.C. Resende, Chrysafis Vogiatzis, Jose L. Walteros, 2014-07-31 This book constitutes the thoroughly refereed post conference proceedings of the 8th International Conference on Learning and Optimization LION 8 which was held in Gainesville FL USA in February 2014 The 33 contributions presented were carefully reviewed and selected for inclusion in this book A large variety of topics are covered such as algorithm configuration multiobjective optimization metaheuristics graphs and networks logistics and transportation and biomedical applications **Business Process Management Workshops** Fabiana Fournier, Jan Mendling, 2015-04-11 This book constitutes the refereed proceedings of ten international workshops held in Eindhoven The Netherlands in conjunction with the 12th International Conference on Business Process Management BPM 2014 in September 2014 The ten workshops comprised Process oriented Information Systems in Healthcare ProHealth 2014 Security in Business Processes SBP 2014 Process Model Collections Management and Reuse PMC MR 2014 Business Processes in Collective Adaptive Systems BPCAS 2014 Data and Artifact centric BPM DAB 2014 Business Process Intelligence BPI 2014 Business Process Management in the Cloud BPMC 2014 Theory and Applications of Process Visualization TaProViz 2014 Business Process Management and Social Software BPMS2 2014 and Decision Mining and Modeling for Business Processes DeMiMoP 2014 The 38 revised full and eight short papers presented were carefully reviewed and selected from 84 submissions In addition six short papers resulting from the Doctoral Consortium at BPM 2014 are included in this book *Immune system modeling and analysis* Ramit Mehr, Miles Davenport, 2015-04-22 The rapid development of new methods for immunological data collection from multicolor flow cytometry through single cell imaging to deep sequencing presents us now for the first time with the ability to analyze and compare large amounts of immunological data in health aging and disease The exponential growth of these datasets however challenges the theoretical immunology community to develop methods for data organization and analysis Furthermore the need to test hypotheses regarding immune function and generate predictions regarding the outcomes of medical interventions necessitates the development of mathematical and computational models covering processes on multiple scales from the genetic and molecular to the cellular and system scales The last few decades have seen the development of methods for presentation and analysis of clonal repertoires those of T and B lymphocytes and phenotypic surface marker based repertoires of all lymphocyte types and for modeling the intricate network of molecular and cellular interactions within the immune systems This e Book which has first appeared as a Frontiers in Immunology research topic provides a comprehensive online open access snapshot of the current state of the art on immune system modeling and analysis Percolation on Triangulations: A Bijective Path to Liouville Quantum Gravity Olivier Bernardi, Nina Holden, Xin Sun, 2023-09-27 View the abstract **Analytic, Algebraic and Geometric Aspects of Differential Equations** Galina Filipuk, Yoshishige

Haraoka, Sławomir Michalik, 2017-06-23 This volume consists of invited lecture notes survey papers and original research papers from the AAGADE school and conference held in Białe Pole Poland in September 2015 The contributions provide an overview of the current level of interaction between algebra geometry and analysis and demonstrate the manifold aspects of the theory of ordinary and partial differential equations while also pointing out the highly fruitful interrelations between those aspects These interactions continue to yield new developments not only in the theory of differential equations but also in several related areas of mathematics and physics such as differential geometry representation theory number theory and mathematical physics The main goal of the volume is to introduce basic concepts techniques detailed and illustrative examples and theorems in a manner suitable for non specialists and to present recent developments in the field together with open problems for more advanced and experienced readers It will be of interest to graduate students early career researchers and specialists in analysis geometry algebra and related areas as well as anyone interested in learning new methods and techniques

Karagiannidis, Muhammad Ismail, 2015-10-12 This book constitutes the thoroughly refereed post conference proceedings of the 10th International Conference on Cognitive Radio Oriented Wireless Networks CROWNCOM 2015 held in Doha Qatar in April 2015 The 66 revised full papers presented were carefully reviewed and selected from 110 submissions and cover the evolution of cognitive radio technology pertaining to 5G networks The papers are clustered to topics on dynamic spectrum access management networking protocols for CR modeling and theory HW architecture and implementations next generation of cognitive networks standards and business models and emerging applications for cognitive networks

Stable Lévy Processes via Lamperti-Type Representations Andreas E. Kyprianou, Juan Carlos Pardo, 2022-04-07 Stable Lévy processes lie at the intersection of Lévy processes and self similar Markov processes Processes in the latter class enjoy a Lamperti type representation as the space time path transformation of so called Markov additive processes MAPs This completely new mathematical treatment takes advantage of the fact that the underlying MAP for stable processes can be explicitly described in one dimension and semi explicitly described in higher dimensions and uses this approach to catalogue a large number of explicit results describing the path fluctuations of stable Lévy processes in one and higher dimensions Written for graduate students and researchers in the field this book systemically establishes many classical results as well as presenting many recent results appearing in the last decade including previously unpublished material Topics explored include first hitting laws for a variety of sets path conditionings law preserving path transformations the distribution of extremal points growth envelopes and winding behaviour

Combinatorial Algebraic Geometry Gregory G. Smith, Bernd Sturmfels, 2017-11-17 This volume consolidates selected articles from the 2016 Apprenticeship Program at the Fields Institute part of the larger program on Combinatorial Algebraic Geometry that ran from July through December of 2016 Written primarily by junior mathematicians the articles cover a range of topics in

combinatorial algebraic geometry including curves surfaces Grassmannians convexity abelian varieties and moduli spaces
