Process Design Tools for the Environment Subhas Sikdar, 2001-05-07 Much of the pollution in the air water or soil results from discharges from industrial activities Industrial practice can be significantly altered to reduce or eliminate the pollution if processes and products are so designed that either toxic materials are not used or processes are inherently less polluting This book is a collection of methods written by experts that would enable industry to design benign processes at the outset to achieve this purpose **Sustainable Design Through Process Integration** Mahmoud M. El-Halwagi, 2011-09-19 This timely book provides authoritative comprehensive and easy to follow coverage of the fundamental concepts and practical techniques on the use of process integration to maximize the efficiency and sustainability of industrial processes Over the past three decades significant advances have been made in treating designing and operating chemical processes as integrated systems Whether you are a process engineer an industrial decision maker or a researcher this book will be an indispensable resource tool for systematically enhancing process performance and developing novel and sustainable process

designs The book is also ideal for use as a text in an upper level undergraduate or an introductory graduate course on process design and sustainability This ground breaking reference enhances and reconciles various process and sustainability objectives such as cost effectiveness yield improvement energy efficiency and pollution prevention The detailed tools and applications within are written by one of the world s foremost process integration and design experts and will save you time and money Contains state of the art process integration approaches and applications including graphical algebraic and mathematical techniques Covers applications that include process economics targeting for conservation of mass and energy synthesis of innovative processes retrofitting of existing systems design and assessment of renewable energy systems and in process pollution prevention Presents fundamentals and step by step procedures that can be applied to the design and optimization of new processes as well the retrofitting and operation of existing processes as well as including numerous examples and case studies for a broad array of industrial systems and processes

Advances in Theoretical and Computational Energy Optimization Processes Ferdinando Salata,Iacopo Golasi,2020-12-29 The paradigm in the design of all human activity that requires energy for its development must change from the past We must change the processes of product manufacturing and functional services This is necessary in order to mitigate the ecological footprint of man on the Earth which cannot be considered as a resource with infinite capacities To do this every single process must be analyzed and modified with the aim of decarbonising each production sector This collection of articles has been assembled to provide ideas and new broad spectrum contributions for these purposes

Symposium on Computer Aided Process Engineering 15th International Symposium on Process Systems Engineering joint event *Case Studies in Food Engineering* J. Peter Clark, 2009-08-12 One of the best ways for students or practitioners to learn is through real life example In this volume Clark presents several case studies that can be used not only by those currently working in the industry but as a means for sparking discussion in food engineering classes This book has several purposes 1 to serve as a source of information about a representative collection of food processes with which Clark has had experience 2 to convey some practical lessons about process development and plant design and 3 to serve educators as a resource for class problems and discussion The book is organized in three broad sections The first concerns processes that are primarily physical such as mixing The second concerns processes that also involve biochemical changes such as thermal sterilization The third section addresses some broader issues that have not been discussed elsewhere including how to tour a plant how to choose among building a new plant expanding or renovating and how to develop processes

Tools and Methods for Pollution Prevention Subhas K. Sikdar, Urmila Diwekar, 2013-11-11 Difficult ethical and political issues confront the application of scientific and technological solutions for preventing pollution from occurring Often the questions embodying proposed solutions to known problems are ambiguous and no singular solution can exist for all locations Yet the common organizing principle for all solutions to environmental problems must be scientific because only sound science can provide a rational understanding that decision makers can use universally The NATO Advanced Research Workshop ARW on Tools and Methods for Pollution Prevention October 12 14 1998 Prague Czech Republic was designed to assemble experts from NATO and former socialist countries of Eastern Europe to discuss science based tools and methods either available or in development that can be used to analyze environmental impacts of manufacturing processes and manufactured products The presentations at the workshop were written up specifically for the purpose of this book albeit after peer reviews and thorough revisions Most of the chapters focus on specific method development for designing environmentally benign processes or products Several chapters take a broader view and focus on such designs from an implementation perspective and dwell on ethical conflicts resistance to change because of inertia or inadequate infrastructure and on the lack of resources We placed these chapters at the beginning of the book The volume starts with the overview by Sikdar et al who describe the scope and difficulties of pollution prevention in the manufacturing sectors
