Arrhythmia Recognition: The Art of Interpretation Tomas B. Garcia, Daniel J. Garcia, 2019-05-13 Arrhythmia Recognition Second Edition teaches any student how to interpret a rhythm strip using foundational concepts and a step by step approach covered in an unintimidating conversational writing style that facilitates learning of this complex subject This text is appropriate for anyone nurses physician assistants cardiovascular technicians allied health professionals paramedics medical students and physicians wishing to learn how to accurately interpret based on

a solid understanding of electrophysiology and pathophysiologic mechanisms in the heart and how these translate to the rhythm strip. It is also an excellent reference text for instructors wishing to expand their knowledge of arrhythmia interpretation. This edition includes full coverage of wide complex tachycardias in four chapters: the basics, the criteria, the approach, and a chapter on synthesis. Interpretation presented in a case study format. Beginner's Perspective boxes written by someone new to arrhythmia recognition provide tips and insight on how to approach the material as a beginner. This edition also includes chapter objectives written to Bloom's taxonomy.

Handbook of Veterinary Neurology - E-Book Michael D. Lorenz, Joan Coates, Marc Kent, 2010-12-07. *Handbook of Veterinary Neurology* provides quick access to vital information on neurologic conditions in a wide range of species including canine, feline, bovine, caprine, equine, ovine, and porcine. A problem-oriented approach makes it easy to diagnose and treat neurologic problems in small and large animals. The coverage of disorders by problem, not by established disease diagnosis, emulates how animals present to the veterinary hospital and simplifies the formulation of a correct diagnosis. Within each chapter, discussions of neurologic disease include a review of the localization criteria and the diseases that can cause that problem, plus treatment and surgical techniques. Lead author Michael D. Lorenz brings decades of experience to neurologic assessment using a diagnostic approach that requires minimal knowledge of neuroanatomy. A problem-based approach is organized by presenting signs rather than by condition, guiding you to logical conclusions regarding diagnosis and treatment. Algorithms diagram the logic necessary to localize lesions and to formulate diagnostic plans. Coverage of current diagnostic techniques includes the use of diagnostic tools such as radiology, spinal fluid analysis, electrodiagnosis, and MR imaging. Case histories in each chapter present a problem and the results of the neurologic examination, then ask you to solve the problem by localizing the lesion, listing probable causes, and making a diagnostic plan. Answers are provided at the back of the book. A consistent format for each case history includes signalment, history, physical examination findings, and neurologic examination. A comprehensive appendix describes species and breeds that have a congenital predisposition for particular neurologic diseases. Extensive references make it easy to pursue in-depth research of more advanced topics. A companion website includes 20 narrated video clips with accompanying PowerPoint slides that correlate to the case histories in the book, covering neurologic assessment and clinical problems such as paresis of one limb, tetraparesis, stupor, seizures, ataxia of the head and limbs, and cranial nerve disorders. Two new co-authors, Jean Coates and Marc Kent, board-certified in neurology, enhance the credibility of this edition. A full-color design and numerous illustrations include enhanced images of neuroanatomy and pathology.
