Disciplinary Intuitions and the Design of Learning

Environments Kenneth Y. T. Lim, 2014-10-19 As children we would have spilt glasses of milk dropped things and broken

things As children therefore we would have developed intuitions about how the world works but we would not necessarily

have been able to explain these workings It would only have been till we entered formal schooling that we would have

learned codifications of canon within each respective discipline and consequently how to articulate the canon to explain the

intuition The preceding example was from the natural sciences but one could just have easily taken an example from say the

environmental sciences or from the social sciences Indeed much of this book does just that as it seeks to chart the territory of

a new theory of learning around Disciplinary Intuitions Many of the chapters within draw frequent and explicit linkages to

curriculum design from the premise of the need to go beyond addressing the conceptions of learners to seeking to

understand the substrate upon which these conceptions are founded The argument is made that this substrate comprises the

particular set of lived experiences of each learner and how because these lived experiences are as tacit as they are diverse

designing curriculum around misconceptions and preconceptions alone would not lead to enduring understanding from first

principles From this perspective Disciplinary Intuitions constitute an exciting field at the nexus of learning theories and

curriculum design *Animating with Stop Motion Pro* Mark Sawicki, 2012-09-10 Animating with Stop Motion Pro is
