

Anatomy and physiology Chapter 17

Steroids

Derived from cholesterol, secreted by gonads and adrenal glands, estrogens, progesterone, testosterone, cortisol, aldosterone, and calcitriol

Peptides and glycoproteins

Created from chains of amino acids, oxytocin, ADH, releasing and inhibiting hormones, anterior pituitary hormones

Monoamines (biogenic amines)

Derived from amino acids, epinephrine, norepinephrine, melatonin, thyroid hormone

Steroid synthesis

Synthesized from cholesterol, differs in functional groups attached to 4-rings steroid backbone

Peptide synthesis

synthesized in same way as any protein, at first, an inactive preprohormone (first several amino acids is a signal peptide that guides it into cisternae of rough ER), single peptide removed to form prohormone, Golgi body does final transformation to hormone packaged for secretion

Insulin synthesis

Begins as preproinsulin, then becomes proinsulin. When connecting peptide is removed, 2 polypeptide chains are formed to make insulin

Hormone transport

Most monoamines and peptides are hydrophilic and mix easily with blood plasma. Steroids and thyroid hormone are hydrophobic. Bind to transport proteins, bound hormones have longer half-life (protected from liver enzymes and kidney filtration), only unbound hormone leaves capillaries to reach target cell. Transport proteins protect circulating hormones from being broken down by enzymes in plasma and liver and from being filtered by kidneys

Hormone receptors

Hormones stimulate only those cells that have receptors for them, receptors are protein or glycoprotein molecules, they act like switches turning on metabolic pathways when hormone binds, usually each target cell has a few thousand receptors for a given hormone. Receptor-hormone interactions exhibit specificity and saturation. Saturated when all receptors are occupied

NEET BIOLOGY, Text Basis Practice and Preparation Volume - I Dr. Satyapriya Roy, Dr. Shilpi Saha, 2025-03-15

Biology is the science of observations. The more we observe about ourselves and our surroundings, the more we can perceive which multiplication and division mean the same thing. As per changing only science in the life processes, it is the site patterns of studying biology have changed a lot. It was previously based on memorizing and cramming the time as nets, but today it is largely based on understanding and applicatory concepts like genetics and molecular biology, biotechnology, etc. The need of the present scenario is to understand the subject and apply the concepts in question solving. The pre-medical examinations these days also do not focus much on asking questions based on just theoretical aspects but they put stress on applicatory concepts. Assertion-reasoning type, Statement-basis, Conflict of Interest, and Case study based questions are very common nowadays. This book, NEET BIOLOGY First Edition Text Basis Practice and Preparation, is such an effort to prepare the students for the National Eligibility cum Entrance Test for Undergraduates (NEET UG). The questions are strictly based on the curriculum by NCERT biology books. All efforts have been made to produce an errorless book. The unique point about this book is that it explains the conceptual questions. At the end of VOL II, 5 Mock tests, sample papers, and previous years' papers (2018-2023) are attached to develop examination temperament in the students. The papers are provided with OMR sheets so that students try solving the paper with the same temperament as he/she has to face in the actual examination hall. Finally, I will be glad to receive constructive criticism and valuable ideas to improve the next editions of this book. I am highly thankful to all of you for your support towards the first edition of this book.
