Transactions Linnean Society of London, 1888 **Essentials of Anatomy and Manual of Practical Dissection, Together with the Anatomy of Viscera** Charles Beylard Nancrede, 1890 Essentials of anatomy and manual of practical dissection together with the anatomy of the viscera prepared especially for students of medicine Charles Beylard Nancrede, 1894 Exercise Countermeasures for Bed-rest Deconditioning John Edward Greenleaf, 1993 The purpose for this 30 day bed rest study was to investigate the effects of short term high intensity isotonic and isokinetic exercise training on maintenance of aerobic work capacity peak oxygen uptake muscular strength and endurance and orthostatic tolerance equilibrium and gait Other data were collected on muscle atrophy bone mineralization and density endocrine analyses of

vasoactivity and fluid electrolyte balance muscle intermediary metabolism and performance and mood of the subjects
 Nineteen men 32-42 yr were allocated into three groups no exercise control peak oxygen uptake and isokinetic tests once wk
 N 5 isotonic exercise training electronic Quinton ergometer supine N 7 and isokinetic exercise training electronic Lido
 ergometer supine N 7 The exercise training regimens were conducted near peak levels for 30 min in the morning and 30 min
 in the afternoon 5 d wk The protocol consisted of a 7 d ambulatory control period during which the subjects equilibrated on
 the standardized diet 30 d of 6 degrees head down bed rest and a final 4-5 d of ambulatory recovery Their diet consisted of
 commonly available fresh and frozen foods mean caloric consumption of 2 678 SE 75 kcal d control 2 833 SE 82 kcal day
 isotonic and 2 890 SE 75 kcal d isokinetic resulted in mean weight losses during bed rest of 1.01 kg 0.85 kg and 0.0 kg
 respectively The results indicated that 1 The subjects maintained a relatively stable mood high morale and high esprit de
 corps throughout the study Scores improved in nearly all performance and mood tests in almost all the subjects Isotonic
 training as opposed to isokinetic exercise training was associated with decreasing levels of psychological tension
 concentration and motivation and with improvement in the quality of sleep 2 Peak oxygen uptake was maintained during bed
 rest with isotonic exercise training it was not maintained as well with isokinetic 9.0% or no exercise 18.2% training If a 9%
 reduction in aerobic power is acceptable isokinetic exercise training could be used for maintenance of strength endurance
 and the reduced aerobic capacity in astronauts during flight 3 In general there were few decreases in strength or endurance
 of arm or leg muscles during bed rest in spite of reduction in size atrophy of some leg muscles 4 There was no effect of
 isotonic or isokinetic exercise training on orthostasis because tilt table tolerances were reduced similarly from 42-53 min to
 30-34 min in the three groups following bed rest 5 Bed rest resulted in significant decreases of postural stability and self
 selected step length stride length and walking velocity which were not influenced by either exercise training regimen Pre bed
 rest responses were restored by the fourth day of recovery
