Perspectives in Conservation Breeding Programs Eliana Pintus, José Luis Ros-Santaella, William Holt, Pierre

Comizzoli, 2025-05-21 Conservation Breeding Programs CBPs remain essential tools to preserve animal biodiversity and save threatened species from extinction Despite the advances made during the last decades CBPs have been carried out only on a small number of species mostly mammals and birds There is therefore an urgent need to develop and complement in situ and ex situ strategies to also preserve other vertebrates like fish amphibians and reptiles in which the biodiversity loss because of climate change or other anthropogenic activities is even more dramatic One of the main factors that limits CBPs success is the lack of knowledge of the animal reproductive biology and behavior which is precisely known for instance in less than 4% of mammals the majority of which are terrestrial species Such knowledge is beneficial not only to enhance but also to control animal fertility that is especially warranted for the management of overabundant or invasive species which represent a further major threat for biodiversity The goal of this Research Topic is to bring together studies that deal with different aspects of animal reproduction both in captive and wild populations This includes both ex situ and in situ approaches such as the management of animal reproduction in captive populations and their reintroduction release into the wild Other approaches such as assisted reproductive technologies and biobanking greatly contribute to the success of conservation breeding This Research Topic also welcomes studies exploring the effects of biotic e g inbreeding diseases stress and abiotic e g anthropogenic activities housing and veterinary care factors on reproductive biology of all vertebrates classes with a special interest to fish amphibians and reptiles As a comprehensive knowledge of animal reproduction and behavior plays a key role for the development and success of breeding programs descriptive studies on reproductive anatomy and physiology of wild or captive species either endangered or overabundant are welcomed The Research Topic also accepts manuscripts that deal with ethical aspects of animal welfare in CBPs and population management of invasive or overabundant species
