Angrau Agriculture Notes:

Agroecology Anand M. R., Poojitha Kommireddy, Seenappa C., Kalyana Murthy K. N., Ningaraju G. K., 2023-12-01

Agroecology literacy is the degree to which people have an objective and well informed understanding of crop production with environmental issues. The increased food grain production has also increased the unscientific and indiscriminate use of agrochemicals which has affected the soil health and degraded agroecosystem adversely and brought down the immunity of soil and the productivity of crops. In addition it has resulted in the over exploitation of soil leading to nutrient imbalance. Moreover the negative impact of chemical agriculture on the environment and human health has been reported and documented. Increased environmental awareness and health consciousness promoted scientists and planners to think about sustainable farming practices as an alternate way for healthy agriculture to protect the environment and human health. Eco friendly methods or ecosystem services are one solution to manage this issue. This book intends to provide the core elements of a curriculum for teaching agroecology at colleges and universities. Although climate change affects everybody it is not gender neutral. It has significant social impacts and magnifies existing inequalities such as the disparity between women and men in their vulnerability and ability to cope with this global phenomenon. This new textbook edited by one of the authors of the seminal *Women and the Environment in the Third World Alliance for the Future 1988* which first exposed the links between environmental degradation and unequal impacts on women provides a comprehensive introduction to gender aspects of climate change. Over 35 authors have contributed to the book. It starts with a short history of the thinking and practice

around gender and sustainable development over the past decades Next it provides a theoretical framework for analyzing climate change manifestations and policies from the perspective of gender and human security Drawing on new research the actual and potential effects of climate change on gender equality and women s vulnerabilities are examined both in rural and urban contexts This is illustrated with a rich range of case studies from all over the world and valuable lessons are drawn from these real experiences Too often women are primarily seen as victims of climate change and their positive roles as agents of change and contributors to livelihood strategies are neglected The book disputes this characterization and provides many examples of how women around the world organize and build resilience and adapt to climate change and the role they are playing in climate change mitigation The final section looks at how far gender mainstreaming in climate mitigation and adaptation has advanced the policy frameworks in place and how we can move from policy to effective action Accompanied by a wide range of references and key resources this book provides students and professionals with an essential
