Fox,2013-11-21 Worldwide 500 000 shipments of materials which pose chemical physical or biological risks to human health property or the environment are made each day by air rail road sea and inland waterways totaling over 3 6 billion metric tons each year To ensure safety during transportation the 2 means by which these dangerous goods and hazardous materials are packaged and handled is prescribed by international authority including the United Nations the International Maritime Organization the International Atomic Energy Agency the International Civil Aviation Organization and the International Air Transport Association as well as national authorities such as the Department of Transportation in the United States In fact the United Nations establishes model regulations that function as recommendations addressed to international organizations and national governments At the core of regulation lies hazard

identification once accurately identified the hazards of dangerous goods may be communicated and the material safely packaged segregated transported and handled by qualified personnel. Incorrectly identified materials increase greatly the risk of explosion fire poisoning or some other mishap. To aid identification each authority maintains a list of the articles substances and materials it regulates comprising thousands of entries including chemical names industry specific terms trade names generic descriptions and other specialized terms common to the language of transportation. While much of this language is recognizable some is less well understood even to transportation environmental and health professionals.

History of Air Cargo and Airmail from the 18th Century Camille Allaz, 2005-03. It was first published in French by the Institut du Transport Aerien in 1998 and received very favourable reviews. Through the publication of the English language edition this remarkable work is now accessible to many more readers around the world. In addition the author has expanded the book with new sections and he has extensively updated it to bring the story of air cargo into the twenty first century concluding with a look into the future. The author Camille Allaz served as Senior Vice President Cargo at Air France for 10 years which gave him an insider's close up view of his subject a privilege not enjoyed by many historians. There is no aspect of mail or cargo transport by air that has not been thoroughly researched and documented by Allaz from the first brief transport of animals by balloon in France in 1783 to the vast global networks of the integrated express carriers in the 21st century. As a true scholar he fits his narrative into the larger framework of political military economic and aviation history. This book should stand for years as the definitive work on the history of air cargo and airmail and will be of immense value to the academic community to the air cargo industry the postal services and to the general public.
