Sedimentation, Tectonics and Eustasy David I. M. Macdonald, 2009-04-15 Over the last ten years seismic and sequence stratigraphic studies have emphasized the role of worldwide fluctuations in sea level in controlling patterns of sedimentation Widely recognized cycles of coastal onlap are thought to have been caused by such global changes This postgraduate and reference text contains contributions from an international team of specialists The book is based upon an IAS meeting which focused attention on the situation at active plate margins covering three major themes the underlying mechanics and rates of relative sea level change at active plate margins the interaction of eustatic and tectonic processes at modern margins recognition of the products in the sedimentary record and possible criteria for distinguishing global eustatic from local tectonic effects This book is intended for those studying and working in sedimentology basin analysis exploration geophysics and petroleum geology **Sequence Stratigraphy and Facies Associations** Henry W.

Posamentier, 2009-04-15 In recent years there has been a virtual explosion of stratigraphic studies utilizing the principles of sequence stratigraphy Although the concept of time stratigraphy is not new the packaging of depositional units into systems tracts and sequences is This new approach has led to the reassessment of areas that in some cases have been the subject of intense geological scrutiny for decades The fundamental principles upon which sequence stratigraphy is based are applicable at a broad range of temporal and physical scales This volume arises from several sessions on sequence stratigraphy held at the Thirteenth International Sedimentological Congress with emphasis on facies associations within a sequence stratigraphic framework Orbital Forcing and Cyclic Sequences P. L. DeBoer, D. G. Smith, 2009-04-08 Classically orbital cycles have been recognized in pelagic and lacustrine sequences characterized by quiet sedimentation not disturbed by tectonics However there is now increasing recognition that orbital cycles do influence climate and oceanography in general terms There is also increasing acceptance of the possibility at least that the effect should be felt over large parts of the Earth's surface and that orbital cycles may well leave signs in other sedimentary environments that are commonly considered to be dominated by tectonics and eustasy Containing thirty one papers from a symposium held at the International

Sedimentological Congress in Nottingham in 1990 this volume spans a range of topics from the astronomical theory behind orbital forcing to field studies dealing with a broad range of sedimentary environments and to modelling and simulation State of the art research papers International expert authorship The latest research in the highly topical subject of orbital forcing

Mathieu, 1995-07-04 Sequence Stratigraphy presently one of the most rapidly growing areas in geology is concerned with the documentation and prediction of how sandstones potential hydrocarbon reservoirs and shales potential source rocks are distributed in time and space within sedimentary basins The book takes a critical look at some of the sequence stratigraphy concepts and provides an account of how these have been applied recently in NW Europe North Sea mid Norway and E Greenland Barents Sea and Svalbard mainly in connection with the exploration for oil and gas There is currently no similar book available

Aeolian Sediments Kenneth Pye, N. Lancaster, 2009-04-06 Studies of aeolian sediments both ancient and modern have exhibited a number of important conceptual advances in recent years In particular there has been a move away from descriptions of sediments bedforms and sedimentary environments toward a new emphasis on the dynamics of aeolian depositional systems at different temporal and spatial scales and their response to external changes in sea levels regional and global climates and tectonics This Special Publication contains a selection of papers that were presented at the Symposium Aeolian Sediments Ancient and Modern held in 1990 It also includes a number of contributions from authors who were not able to attend the meeting but whose work reflects important aspects of contemporary research in aeolian sedimentology State of the art research papers in
