2015 Passenger Car and 2014 Concept Car Yearbook Automotive Engineering International, 2014-11-21 Every year global automakers introduce new or significantly re engineered passenger vehicles with increasingly advanced technology intended to exceed consumer expectations and satisfy increasingly stringent government regulations Some of these technologies are firsts of their kind and start trends that other automakers soon follow with the innovations becoming adopted across the board The supply community is also increasingly playing a more significant role in helping the original equipment manufacturers research develop and introduce the latest engineering innovations that help bring competitive advantage for their automaker partners Each year the editors of SAE's Automotive Engineering magazine publish many articles focused on the technology and engineering innovations of new passenger and concept vehicles and these articles have been collected into this volume This 2015 Passenger Car and 2014 Concept Car Yearbook is the fourth in an ongoing series of books that provide yearly snapshots of the latest and greatest technologies introduced by the automotive industry In this book we explore from an OEM and supplier perspective the newest and most technically interesting production vehicles released for the 2015 model year In addition we also have included a technology focused recap of the concept cars revealed during 2014 Readers will have in one publication a complete overview of the key advances that took place over the course of the year from around the world Each new model is profiled in its own chapter with one or more articles by the award winning editors and contributors of Automotive Engineering in this exclusive compilation of print and online content The novel engineering aspects of each new vehicle are explored with exclusive interviews of key engineers and product developers providing insights you can only get from you can only get from Automotive Engineering This book is published for the most technically minded enthusiasts who are interested in new car technologies as well as practicing automotive engineers who are interested in new engineering trends Engineering trends explored focus on what engineers are doing to meet the sometimes conflicting consumer and governmental demands for improved vehicle fuel efficiency performance safety and comfort In short this book Provides a single source for information on the key engineering trends of the year from both automaker and supplier perspectives Allows the reader to skip to chapters that cover specific car models that interest them or read about all models from beginning to end Makes for dynamic book reading with its large number of big full color images and easy reading magazine format

Finite Element Analysis of Polymers and Composites Sathish Kumar Palaniappan, Rajeshkumar Lakshminarasimhan, Sanjay Mavinkere Rangappa, Suchart Siengchin, 2024-08-30 Finite Element Analysis of Polymers and its Composites offers up to date and significant findings on the finite element analysis of polymers and its composite materials It is important to point out that to date there are no books that have been published in this concept Thus academicians researchers scientists engineers and students in the similar field will benefit from this highly application oriented book This book summarizes the experimental mathematical and numerical analysis of polymers and its

composite materials through finite element method It provides detailed and comprehensive information on mechanical properties fatigue and creep behaviour thermal behaviour vibrational analysis testing methods and their modeling techniques In addition this book lists the main industrial sectors in which polymers and its composite materials simulation is used and their gains from it including aeronautics medical aerospace automotive naval energy civil sports manufacturing and even electronics Expands knowledge about the finite element analysis of polymers and composite materials to broaden application range Presents an extensive survey of recent developments in research Offers advancements of finite element analysis of polymers and composite materials Written by leading experts in the field Provides cutting edge up to date research on the characterization analysis and modeling of polymeric composite materials *Natural Fiber Composites* R.D.S.G.

Campilho,2015-11-05 This book brings value to anyone working with or designing natural fiber composite structures It helps readers understand the value these materials can add to projects how to choose the best materials and treatments how to safely design and fabricate products made of natural fiber composites and how to test them for safety It covers the characterization of natural fibers matrices and respective composites and how to enhance their performance and processing as well as testing and degradation issues [Encyclopedia of Renewable and Sustainable Materials](#) ,2020-01-09

Encyclopedia of Renewable and Sustainable Materials Five Volume Set provides a comprehensive overview covering research and development on all aspects of renewable recyclable and sustainable materials The use of renewable and sustainable materials in building construction the automotive sector energy textiles and others can create markets for agricultural products and additional revenue streams for farmers as well as significantly reduce carbon dioxide CO₂ emissions manufacturing energy requirements manufacturing costs and waste This book provides researchers students and professionals in materials science and engineering with tactics and information as they face increasingly complex challenges around the development selection and use of construction and manufacturing materials Covers a broad range of topics not available elsewhere in one resource Arranged thematically for ease of navigation Discusses key features on processing use application and the environmental benefits of renewable and sustainable materials Contains a special focus on sustainability that will lead to the reduction of carbon emissions and enhance protection of the natural environment with regard to sustainable materials

Green Composites Caroline Baillie,Randika Jayasinghe,2017-01-27 Green Composites Waste based Materials for a Sustainable Future Second Edition presents exciting new developments on waste based composites New additional or replacement chapters focus on these elements reflecting on developments over the past ten years Authors of existing chapters have brought these themes into their work wherever possible and case study chapters that connect materials engineering to the topic s social context are included in this revised edition Professor Baillie believes that the new green is the what and who composites are being designed for what material needs we have and what access different groups have to the technical knowledge required etc Industry is now showing concerns for corporate social responsibility and social

impact Recent conversations with prestigious materials institutions have indicated a growing interest in moving into areas of research that relate their work to beneficial social impacts The book s example of Waste for Life demonstrates the genre proposed for the case study chapters Waste for Life adopts scientific knowledge and low threshold high impact technologies Provides insights into the changes in the Industry including a greater understanding of noticing that the bottom line is influenced by poor social relations and negative social impact Presents tactics any industry should consider to make engineering part of the solution instead of the problem Includes case study chapters that connect materials engineering in a social context Covers waste green composites fueling a new direction of research for many Universities Manufacturing of Natural Fibre Reinforced Polymer Composites Mohd Sapuan Salit,Mohammad Jawaaid,Nukman Bin Yusoff,M. Enamul Hoque,2015-09-10 Natural fibre composite is an emerging material that has great potential to be used in engineering application Oil palm sugar palm bagasse coir banana stem hemp jute sisal kenaf roselle rice husk betul nut husk and cocoa pod are among the natural fibres reported to be used as reinforcing materials in polymer composites Natural fibre composites were used in many industries such as automotive building furniture marine and aerospace industries The advantages of natural fibre composites include low cost renewable abundance light weight less abrasive and they are suitable to be used in semi or non structural engineering components Research on various aspects of natural fibre composites such as characterization determination of properties and design have been extensively carried out However publications that reported on research of manufacture of natural fibre composites are very limited Specifically although manufacturing methods of components from natural fibre composites are similar to those of components from conventional fibre composites such as glass carbon and Kevlar fibres modification of equipment used for conventional fibre composites may be required This book fills the gap of knowledge in the field of natural fibre composites for the research community Among the methods reported that are being used to produce components from natural fibre composites include hand lay up compression moulding filament winding injection moulding resin transfer moulding pultrusion and vacuum bag moulding This book is also intended to address some research on secondary processing such as machining and laser welding of natural fibre composites It is hoped that publication of this book will provide the readers new knowledge and understanding on the manufacture of natural fibre composites **Composite and Composite Coatings** Mohamed Thariq Hameed Sultan,S. Arulvel,K. Jayakrishna,2022-02-09 Applications of composite materials and composite coatings have been increasing in the field of automobile and aerospace industries due to the versatility in their properties Present book comprehensively reviews the composite materials and coatings with a focus on the mechanical and tribology applications It covers type of fibres natural and synthetic reinforcements and their selection matrix and technologies used to produce composite materials Various sections cover basics and associated failures of composites strengthening mechanisms and background theories composite manufacturing technologies mechanical and tribology properties of past and currently used composites Features Covers

different types of fibers reinforcements matrix and technologies used to produce composite materials Details the tribology behavior of different novel composite coatings fabricated using different coating techniques Reviews research on wear behavior of composite materials and coatings Discusses reinforcement behavior with respect to the different processing routes Illustrates rule of mixtures failures theories behind the strengthening mechanism This book aims at professionals graduate students and researchers in mechanical engineering design engineering composite materials composite coatings tribology automobile and aircraft **Autocar**, 2005 Thermoplastic Polymer Composites Sodagudi Francis Xavier, 2022-11-22 THERMOPLASTIC POLYMER COMPOSITES The monograph represents a life long career in industry and academia and creates an exhaustive and comprehensive narrative that gives a complete understanding of important and state of the art aspects of polymer composites including processing properties performance applications filled polymer composites short fiber reinforced composites long fiber reinforced composites continuous fiber reinforced composites nanocomposites applications and recycling polymer composites Readers can have confidence that Thermoplastic Polymer Composites TPC gives a comprehensive understanding of polymer composites processing properties applications and their recyclability Provides a complete understanding of man made as well as natural fiber reinforced polymer FRP composites and explores in depth how short fiber long fiber and continuous fiber can transform the entire domain of composites processing and properties Provides a deep understanding of nanocomposites with more than 50 examples covering both commodities as well as engineering thermoplastics It presents conducting composites and several bio medical applications of composites that are already passed through laboratories Audience This unique reference book will be of great value to researchers and postgraduate students in materials science polymer science as well industry engineers in plastics manufacturing Those working in product development laboratories of polymer and allied industries will also find it helpful *What Could Possibly Go Wrong*. . .
