research fields. Rather paradoxically it has also been highlighted that GSH and notably its catabolites as originated by metabolism by gamma glutamyltransferase can promote oxidative processes by participating in metal ion mediated reactions eventually leading to formation of reactive oxygen species and free radicals. Also a fundamental role of GSH has been recognized in the storage and transport of nitric oxide NO in the form of S-nitrosoglutathione GSNO. The significance of GSH as a major factor in regulation of cell life, proliferation and death can be regarded as the integrated result of all these roles as well as of more which are emerging in diverse fields of biology and pathophysiology. Against this background modulation of GSH levels and GSH related enzyme activities represents a fertile field for experimental pharmacology in numerous and diverse perspectives of animal, plant and microbiologic research. This research topic includes 14 articles i.e. 4 Opinion Articles, 6 Reviews and 4 Original Research Articles. The contributions by several distinguished research groups each from his own standpoint of competence and expertise provide a comprehensive and updated view over the diverse roles, the changing faces of GSH and GSH related enzymes in cell's health, disease and death.
