Paper 1 Example (3 SAQs & 1 ERQ)

Answer all questions in this section. Marks will be awarded for focused answers supported by relevant knowledge and study.

1. Describe neuroplasticity, with reference to one study. [9 marks]

Neuroplasticity is the brain's ability to change in response to environmental demands. This occurs through neuronal unmasking and neural pruning. Neuronal unmasking is when the brain activates dormant neurons and strengthens them through practice, which increases neuronal density in the areas of the brain with recent patterns of activity. Long-term potentiation is the term used for the strengthening of neural networks through recent patterns of activity in specific regions of the brain that cause a long-lasting increase in signal transmission in those regions and this explains how the brain structure changes as a result of environmental demands. However, a lack of activity in neural networks leads to the weakening and the elimination of these networks which is known as neural pruning. Many studies have investigated neuroplasticity in action, namely Maguire et al. (2000) which investigated whether structural changes were evident in the brains of people with extensive experience in spatial navigation.

The study compared MRI scans of 16 right-handed male taxi drivers in London that have all been driving for at least 1.5 years to the MRI scans of 50 right-handed males from the London Hospital who were not taxi drivers. The mean age did not differ between the experimental group and the control group. They found that the taxi drivers had increased grey matter in the hippocampal areas as compared to the control group which suggests that the hippocampus plays a role in spatial navigation. Furthermore, they found that the taxi drivers had larger posterior hippocampi than the control group, whilst the control group had larger anterior hippocampus than the taxi drivers. This demonstrates long-term potentiation occurring in the taxi drivers' posterior hippocampi. Since, the taxi drivers use their spatial navigation skills frequently, the recent activity in the posterior hippocampus leads to the strengthening of the neural networks in that region which increases the neural density and is evident through the larger volume of the posterior hippocampus in the taxi drivers. Moreover, a positive correlation between the number of years driving and the volume of the posterior hippocampus was discovered, which creates a direct link between increased use of spatial navigation skills and the volume of that region. This further demonstrates the effects of long-term potentiation on brain structure and, therefore, the relationship between brain structure and environmental demands. They concluded that the structural changes were evident in the brains of the taxi drivers, with extensive experience in spatial navigation and the findings of this study act as evidence for neuroplasticity as the changes in the volume of the posterior hippocampus (a change in the structure of the brain) is shown to be impacted by the experience in spatial navigation (the environmental demand).

Feedback:

Excellent links made.

You described two specific parts of neuroplasticity, but not what it is in general.

2014 SI Ib Psychology Paper 1:

Positive Psychological Intervention Design and Protocols for Multi-Cultural Contexts Llewellyn Ellardus Van Zyl, Sebastiaan Rothmann Sr., 2019-06-11 This volume presents innovative and contemporary methodologies and intervention protocols for the enhancement of positive psychological attributes in multicultural professional and organizational contexts. Most methods, models, and approaches that underpin positive psychological interventions are confined to clinical samples, closed systems, or monocultural contexts which restrict their applicability to particular contexts. Extensive practical intervention protocols, designs, and methods which usually accompany first draft intervention papers are condensed into brief paragraphs in final manuscripts or removed in their entirety. This in turn reduces their potential for replicability or adoption by consumers, practitioners, or industry. This volume develops guidelines for enhancing positive psychological attributes such as positive moods, e.g. positive affect, life satisfaction, strengths, e.g. gratitude, humour, cognitions, e.g. hope, optimism, and behaviours, e.g. emotional regulation, positive relationship building within various multicultural contexts. Thereby it shows how positive psychology interventions can be replicated to a wide range of contexts beyond those in which they were developed.

Unifying Causality and Psychology Gerald Young, 2016-05-17 This magistral treatise approaches the integration of psychology through the study of the multiple causes of normal and dysfunctional behavior. Causality is the focal point reviewed across disciplines. Using diverse models, the book approaches unifying psychology as an ongoing project that integrates genetics, experience, evolution, brain development, change mechanisms, and so on. The book includes in its integration free will epitomized as freedom in being. It pinpoints the role of the self in causality and the freedom we have in determining our own behavior. The book deals with disturbed behavior as well and tackles the DSM 5 approach to mental disorder and the etiology of psychopathology. Young examines all these topics with a critical eye and gives many innovative ideas and models that will stimulate thinking on the topic of psychology and causality for decades to come. It is truly integrative and original. Among the topics covered: Models and systems of causality of behavior; Nature and nurture; evolution and complexities; Early adversity; fetal programming and getting under the skin; Free will in psychotherapy helping people believe; Causality in psychological injury and law; basics and critics; A Neo Piagetian Neo Eriksonian 25 step sub stage model. *Unifying Causality and Psychology* appeals to the disciplines of psychology, psychiatry, epidemiology, philosophy, neuroscience, genetics, law, the social sciences, and humanistic fields in general and other mental health fields. Its level of writing makes it appropriate for graduate courses as well as researchers and practitioners. *Cognitive, Psychological, and Psychiatric Consequences of the Coronavirus (COVID-19) Pandemic in the Population of Older Persons with Cognitive Impairment, Dementia, and/or Neuropsychiatric Disorders* Gianfranco Spalletta, Walter Gianni, Miia Kivipelto, Katie Palmer, 2021-12-20
