2014 Metric Exemplar For November:

Foundations of Info-metrics Amos Golan, 2018 Info metrics is the science of modeling reasoning and drawing inferences under conditions of noisy and insufficient information. It is at the intersection of information theory, statistical inference, and decision making under uncertainty. It plays an important role in helping make informed decisions even when there is inadequate or incomplete information because it provides a framework to process available information with minimal reliance on assumptions that cannot be validated. In this pioneering book, Amos Golan, a leader in info metrics, focuses on unifying information processing, modeling, and inference within a single constrained optimization framework. *Foundations of Info Metrics* provides an overview of modeling and inference rather than a problem-specific model and progresses from the simple premise that information is often insufficient to provide a unique answer for decisions we wish to make. Each decision or solution is derived from the available input information along with a choice of inferential procedure. The book contains numerous multidisciplinary applications and case studies which demonstrate the simplicity and generality of the framework in real-world settings. Examples include initial diagnosis at an emergency room, optimal dose decisions, election forecasting, network and information aggregation, weather pattern analyses, portfolio allocation, strategy inference for interacting entities, incorporation of prior information, option pricing, and modeling an interacting social system. Graphical representations illustrate how results can be visualized, while exercises and problem sets facilitate extensions. This book is designed to be accessible for researchers, graduate students, and practitioners across the disciplines. *Management* John R.

Schermerhorn, Jr., Daniel G. Bachrach, 2025-09-30 Inspire students to be responsible and self-aware decision makers. *Management* 16th Edition supports active and engaged course environments while centralizing new topics such as artificial intelligence, diversity, equity, inclusion, and social impact. With a focus on career application, the underlying goal is to translate foundational theories into lasting tools for students as they move beyond the classroom where their skills will be put to the test.

Automatic Assessment of Parkinsonian Speech Juan I. Godino-Llorente, 2021-01-02 This book constitutes the revised and extended papers of the First Automatic Assessment of Parkinsonian Speech Workshop AAPS 2019 held in Cambridge, Massachusetts, USA, in September 2019. The 6 full papers were thoroughly reviewed and selected from 15 submissions. They present recent research on the automatic assessment of parkinsonian speech from the point of view of such disciplines as machine learning, speech technology, phonetics, neurology, and speech therapy.

Grid Optimal Integration of Electric Vehicles: Examples with Matlab Implementation Andrés Ovalle, Ahmad Hably, Seddik Bacha, 2018-02-04 This book is a compilation of recent research on distributed optimization algorithms for the integral load management of plug-in electric vehicle (PEV) fleets and their potential services to the electricity system. It also includes detailed developed Matlab scripts. These algorithms can be implemented and extended to diverse applications where energy management is required: smart buildings, railways systems, task sharing in micro grids, etc. The proposed methodologies optimally manage PEV fleets.

charge and discharge schedules by applying classical optimization game theory and evolutionary game theory techniques Taking owner s requirements into consideration these approaches provide services like load shifting load balancing among phases of the system reactive power supply and task sharing among PEVs The book is intended for use in graduate optimization and energy management courses and readers are encouraged to test and adapt the scripts to their specific applications
