The Next Generation of Testing Hong Jiao, Robert W. Lissitz, 2015-11-01 The Race To The Top RTTP federal education policy fostered a new generation of state tests This policy advocated adopting common core standards which set a higher level of learning targets for students in the US K 12 education These standards are intended to assess higher order thinking skills and prepare students ready for college and career In the meantime they are aligned with those for international assessments which keep US students abreast of their international peers Furthermore the new generation of state tests requires the use of technology enhanced items to align student assessments with student learning environment Computer technology is indispensable to accomplish this goal Computer based tests related to common core standards are different from previous state computer based tests in two important aspects one is that the current version requires accurate assessment of students along all ability levels and the other is that it promotes the use of an efficient test delivery system essentially the use of computerized adaptive assessment in K 12 state testing programs In addition to providing summative information about student learning the new common core tests add formative assessment component in the whole assessment system to provide timely feedback to students and teachers during the process of student learning and teacher instruction As with its predecessor the new assessment policy also holds teachers and schools accountable for student learning With the requirements by the new federal education policy states formed two consortia Partnership for Assessment of Readiness for College and Careers PARCC and Smarter Balanced Assessment Consortium SBAC to develop assessments in alignment with the new common core standards This book is based on the presentations made at the Thirteenth Annual Maryland Assessment Research Center's Conference on The Next Generation of Testing Common Core Standards Smarter Balanced PARCC and the Nationwide Testing Movement Experts from the consortia and nationwide overviewed the intention history and the current status of this nationwide testing movement Item development test design and transition from old state tests to the new consortia tests are discussed Test scoring and reporting are specially highlighted in the book The challenges related to standard setting for the new test especially in the CAT environment and linking performance standards from state tests with consortium tests were explored The issues of utilizing the consortium test results to evaluate students college and career readiness is another topic

addressed in the book The last chapters address the critical issue of validity in the new generation of state testing programs Overall this book presents the latest status of the development of the two consortium assessment systems It addresses the most challenging issues related to the next generation of state testing programs including development of innovative items assessing higher order thinking skills scoring of such items standard setting and linkage with the old state specific standards and validity issues This edited book provides a very good source of information related to the consortium tests based on the common core standards

[Weapons of Math Destruction](#) Cathy O'Neil, 2016-09-06 A manual for the 21st century citizen accessible refreshingly critical relevant and urgent Financial Times Fascinating and deeply disturbing Yuval Noah Harari Guardian Books of the Year In this New York Times bestseller Cathy O'Neil one of the first champions of algorithmic accountability sounds an alarm on the mathematical models that pervade modern life and threaten to rip apart our social fabric We live in the age of the algorithm Increasingly the decisions that affect our lives where we go to school whether we get a loan how much we pay for insurance are being made not by humans but by mathematical models In theory this should lead to greater fairness everyone is judged according to the same rules and bias is eliminated And yet as Cathy O'Neil reveals in this urgent and necessary book the opposite is true The models being used today are opaque unregulated and incontestable even when they're wrong Most troubling they reinforce discrimination Tracing the arc of a person's life O'Neil exposes the black box models that shape our future both as individuals and as a society These weapons of math destruction score teachers and students sort CVs grant or deny loans evaluate workers target voters and monitor our health O'Neil calls on modellers to take more responsibility for their algorithms and on policy makers to regulate their use But in the end it's up to us to become more savvy about the models that govern our lives This important book empowers us to ask the tough questions uncover the truth and demand change

Identity, Oppression, and Diversity

in Archaeology Laura E. Heath-Stout, 2024-10-31 Identity Oppression and Diversity in Archaeology documents how racism classism sexism heterosexism and ableism affect the demographics of archaeology and discusses how knowledge that archaeologists produce is shaped by the discipline's demographic homogeneity Previous research has shown that like many academic fields archaeology is numerically dominated by straight white cisgender people and those in positions of authority are predominantly men This book examines how and why those demographic trends persist It also elucidates how individual archaeologists' social identities shape the research they conduct and therefore how our demographics affect and limit our knowledge production on a disciplinary scale It explains how through unflinching reflection proactive policymaking and sincere community building we can build a diverse and inclusive discipline This book will appeal to archaeologists who have an interest in diversity and inclusion within the discipline as well as scholars in other disciplines who are engaged in research on diversity in academia

To Halt Or Not To Halt? That Is The Question Cristian S Calude, 2024-03-20 This is a book about the Halting Problem arguably the most famous computer related problem can an algorithm decide in finite time whether an arbitrary computer program eventually stops This seems a dull petty question after all you run the program and wait till it stops However what if the program does not stop in a reasonable time a week a year or a decade Can you infer that it will never stop The answer is negative Does this raise your interest If not consider these questions Can mathematics be done by computers only Can software testing be fully automated Can you write an anti virus program which never needs any updates Can we make the Internet perfectly secure Your guess is correct the answer to each question is negative The Halting Problem is hidden in many subjects from logic is mathematics free of contradictions physics is quantum randomness perfect to philosophy do humans have free will or do our brains generate our thoughts and decisions in a deterministic way and quantum computing why we don't have a quantum Halting Problem this book will visit each of them Written in an informal and thought provoking language supported with suggestive illustrations and applications and almost free of arcane mathematics formal arguments are relegated to particular parts dedicated to the mathematically oriented reader the book will stimulate the curiosity and participation of the reader interested in the consequences of the limits of computing and in various attempts to cope with them

The Gambler and the Scholars John F. Dooley, 2023-04-05 In May 1917 William and Elizebeth Friedman were asked by the U S Army to begin training officers in cryptanalysis and to decrypt intercepted German diplomatic and military communications In June 1917 Herbert Yardley convinced the new head of the Army's Military Intelligence Division to create a code and cipher section for the Army with himself as its head These two seminal events were the beginning of modern American cryptology the growth of which culminated 35 years later with the creation of the National Security Agency Each running their own cryptologic agencies in the 1920s the Friedman Yardley relationship was shattered after Yardley published a tell all book about his time in military intelligence Yet in the end the work they all started in 1917 led directly to the modern American intelligence community As they got older they became increasingly

irrelevant in the burgeoning American cryptologic fraternity Topics and features Examines the lives of three remarkable and pioneering cryptologists Offers fascinating insights into spies codes and ciphers rumrunners poker and military history Sheds new light on interesting parts of the cryptologists careers especially Elizebeth Friedman whose work during World War II has just begun to be explored Recounts several good stories i e What if the Friedmans had gone to work for Herbert Yardley in his new Cipher Bureau in 1919 What if Yardley had moved back to Washington to work for William Friedman a decade later This enjoyable book has wide appeal for general readers interested in the evolution of American cryptology American historians particularly of World War I the inter war period and World War II signals intelligence and historians of and general readers interested in American military intelligence It also can be used as an auxiliary text or recommended reading in introductory or survey courses in history or on the related topics
