

[7] The two-port network P shown in the figure has ports 1 and 2, denoted by terminals (a,b) and (c,d), respectively. It has an impedance matrix Z with parameters denoted by Z_{11} , Z_{12} , Z_{21} , and Z_{22} . A 1Ω resistor is connected in series with the network at port 1 as shown in the figure. The

[8] The Maxwell's bridge shown in the figure is at balance. The parameters of the inductive coil are [GATE 2010]

- A. $R=R_2R_3/R_4$, $L=C_4R_2R_3$
 B. $L=R_2R_3/R_4$, $R=C_4R_2R_3$
 C. $R=R_4R_2R_3$, $L=1/(C_4R_2R_3)$
 D. $L=R_4R_2R_3$, $R=1/(C_4R_2R_3)$

Statement for Q9 & Q10:

The L-C circuit shown in the figure has an inductance $L=1\text{mH}$ and a capacitance $C=10\mu\text{F}$.

Question [9]: The initial current through the inductor is zero, while the initial capacitor voltage is 100V . The switch is closed at $t=0$. The current i through the circuit is: [GATE 2010]

- A. $5\cos(5\times 10^3t)\text{A}$
 B. $5\sin(10^4t)\text{A}$
 C. $10\cos(5\times 10^3t)\text{A}$
 D. $10\sin(10^4t)\text{A}$

Advances in Pilot Wave Theory Paulo Castro, John W. M. Bush, José Croca, 2024-06-17 This book provides a state of the art review of Pilot Wave Theory at the beginning of the XXI century. It contains the best contributions of the first International Conference on Advances in Pilot Wave Theory held in Lisbon in 2021. The event brought together physicists from the new emerging field of Hydrodynamic Quantum Analogs HQA and philosophers of science. Three main themes were discussed: 1 Hydrodynamic quantum analogs 2 Theoretical advances in pilot wave physics and 3 Philosophical foundations of pilot wave theory. Recent experimental work in HQA has provided impetus to develop the pilot wave approach into a realistic basis of quantum mechanics specifically a dynamical completion of the existing theory of quantum statistics. To that end the meeting featured theoretical work that advanced Louis de Broglie original pilot wave theory. This collection shows how several aspects of quantum systems have been reproduced in the hydrodynamic environment and how the power of analogy suggests the possibility of a relatively intelligible quantum realm. Most notably the notion of memory as engendered in the pilot wave hydrodynamic system suggests a profitable direction to explore in developing a more complete description of quantum phenomena. This book is expected to be of great interest to physicists computer scientists and philosophers of science interested in the foundations of Quantum Mechanics. Chapter 1 and Chapter 12 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Evolution "On Purpose" Peter A. Corning, Stuart A. Kauffman, Denis Noble, James A. Shapiro, Richard I. Vane-Wright, 2023-08-22 A unique exploration of teleonomy also known as evolved purposiveness as a major influence in evolution by a broad range of specialists in biology and the philosophy of science. The evolved purposiveness of living systems termed teleonomy by chronobiologist Colin Pittendrigh has been both a major outcome and causal factor in the history of life on Earth. Many theorists have appreciated this over the years going back to Lamarck and even Darwin in the nineteenth century. In the mid twentieth century however the complex dynamic process of evolution was simplified into the one way bottom up single gene centered paradigm widely known as the modern synthesis. In *Evolution On Purpose* edited by Peter A. Corning, Stuart A. Kauffman, Denis Noble, James A. Shapiro, Richard I. Vane-Wright and Addy Pross some twenty theorists attempt to modify this reductive approach by exploring in depth the different ways in which living systems have themselves shaped the course of evolution. *Evolution On Purpose* puts forward a more inclusive theoretical synthesis that goes far beyond the underlying principles and assumptions of the modern synthesis to accommodate work since the 1950s in molecular genetics developmental biology epigenetic inheritance genomics multilevel selection niche construction physiology behavior biosemiotics chemical reaction theory and other fields. In the view of the

authors active biological processes are responsible for the direction and the rate of evolution Essays in this collection grapple with topics from the two way read write genome to cognition and decision making in plants to the niche construction activities of many organisms to the self making evolution of humankind As this collection compellingly shows and as bacterial geneticist James Shapiro emphasizes The capacity of living organisms to alter their own heredity is undeniable

Pathways to the Origin and Evolution of Meanings in the Universe Alexei A. Sharov, George E. Mikhailovsky, 2024-02-28 Pathways to the Origin and Evolution of Meanings in the Universe The book explains why meaning is a part of the universe populated by life and how organisms generate meanings and then use them for creative transformation of the environment and themselves This book focuses on interdisciplinary research at the intersection of biology semiotics philosophy ethology information theory and the theory of evolution Such a broad approach provides a rich context for the study of organisms and other semiotic agents in their environments This methodology can be applied to robotics and artificial intelligence for developing robust adaptable learning devices In this book leading interdisciplinary scholars reveal their vision on how to integrate natural sciences with semiotics a theory of meaning making and signification Developments in biology indicate that the capacity to create and understand signs is not limited to humans or vertebrate animals but exists in all living organisms the fact that inspired the integration of biology and semiotics into biosemiotics The authors discuss the nature of semiotic agents organisms and other autonomous goal directed units meaning signs information memory evolution and consciousness Also discussed are issues including the origin of life potential meaning and its actualization top down causality in physics and biology capacity of organisms to encode their functions the strategy of organisms to combine homeostasis with direct adaptation to new life cycle phases or new environments multi level memory systems increase of freedom via enabling constraints creative modeling in evolution and learning communication in animals and humans the origin and function of language and the distribution and transfer of life in space This is the first book on biosemiotics in its global conceptual and spatial scope Biosemiotics is presented using the language of natural sciences which supports the scientific grounding of semiotic terms Finally the cosmic dimension of life and meaning making leads to a reconsideration of ethical principles and ecological mentality here on earth and in space exploration Audience Theoretical biologists ethologists astrobiologists ecologists evolutionary biologists philosophers phenomenologists semioticians biosemioticians molecular biologists linguists system scientists and engineers

Science Identities Henriette Tolstrup Holmegaard, Louise Archer, 2023-01-23 This edited volume brings together a state of the art collection of leading and emergent research on the burgeoning topic of science identities It sets out how science identity can be productively used as a lens in understanding patterns and inequalities in science participation across different educational and international contexts Its chapters reveal how intersections of social identities and inequalities shape participation and engagement in science Particular attention is given to explicating issues of theory and method identifying the potential and limitations of approaches and lacunae in existing

knowledge The book showcases research from a range of disciplinary areas employing diverse methodological and conceptual approaches to investigate science identities across different fields and settings The collection offers a rich and comprehensive understanding of how science identity can be used conceptually methodologically and analytically to understand how learners and teachers relate to and make sense of science It s a valuable resource for students researchers and academics in the field of science education and anyone who is interested in identity and education Theory and Practice Harm Jan Smid,2022-12-16 This book describes and analyses the history of Dutch mathematics education from the point of view of the changing motivations behind the teaching of mathematics over a 200 year period During the course of the 19th century mathematics in the Netherlands developed from a topic for practitioners into a school topic that was taught to almost all pupils of secondary education As mathematics teaching gradually lost its practical orientation and became more and more motivated on the basis of its supposed formative value the HBS Hogere Burgerschool the Dutch variant of the German Realschule became the dominant school of thought for mathematics pedagogy This book examines the gradual development of the field culminating in the country wide adoption of Realistic Mathematics Education as the new method of mathematics teaching This book is important for anyone who is interested in the history of mathematics education It provides an interesting perspective on the development of mathematics education in a country that in many aspects went its own way
