

JANUARY ... DOES IT BRING YOU JOY?

- 1 January is the time for renewal on many fronts. It's the time of the year to re-evaluate everything. If something or someone doesn't bring you joy, it's pretty pointless carrying on with it. If we want the best, we must do our best. We must keep our family space safe and secure so that we are thriving as a people and as a nation. 5
- 2 In order to live their best lives, people are spreading themselves thinner and thinner with multiple streams of income. In the process we earn more but live less, we lose our focus of what is important.
- 3 With social media, keeping up with other Instagrammers are having a devastating effect on self-perception. Everything appears to be real perfect, but the fabric of our society is frazzled. Use January to take stock and start navigating new ways of doing things. Instead of multiple streams of sole sessions, travel more, and connect with people and places that bring you joy. 10

Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination For example the directional relationships between perceptual and cognitive disturbances e g in attention memory executive function predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored In addition few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual exploration which can provide important data on functioning of the perception for action pathway Relatedly studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristics of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition An additional important area involves treatment of visual disturbances in schizophrenia Two major questions regarding this are 1 can visual processing be improved in cases where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2 what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia Other important and understudied questions concern 1 the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse treatment response and or recovery 2 the potential role of visual functioning in diagnosing and predicting illness 3 the extent

to which some visual perception disturbances are diagnostically specific to schizophrenia and 4 the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics electroencephalography neuroimaging computational and animal models and other methods reviews hypotheses theories opinion methods areas of impact and historical perspectives *Western Europe 2013* Wayne C.
