Green Analytical Chemistry Miguel de la Guardia,Sergio Armenta,2010-10-27 This book provides basic coverage of the fundamentals and principles of green chemistry as it applies to chemical analysis The main goal of Green Analytical Chemistry is to avoid or reduce the undesirable environmental side effects of chemical analysis while preserving the classic analytical parameters of accuracy sensitivity selectivity and precision The authors review the main strategies for greening analytical methods concentrating on minimizing sample preparation and handling reducing solvent and reagent consumption reducing energy consumption minimizing of waste operator safety and the economic savings that this approach offers Suggestions are made to educators and editors to standardize terminology in order to facilitate the identification of analytical studies on green alternatives in the literature because there is not a wide and generalized use of a common term that can group efforts to prevent waste avoid the use of potentially toxic reagents or solvents and those involving the decontamination of wastes provides environmentally friendly alternatives to established analytical practice focuses on the cost saving opportunities offered emphasis on laboratory personnel safety

Analytical Chemistry, International Adaptation Gary D. Christian,Purnendu K. Dasgupta,Kevin A. Schug,2020 With the 7th Edition of Analytical Chemistry renowned chemists Purnendu Sandy Dasgupta and Kevin Schug both of the University of Texas Arlington join the author team The new edition focuses on more in depth coverage of the principles and techniques of quantitative analysis and instrumental analysis aka Analytical Chemistry The goal of the text is to provide a foundation of the analytical process tools and computational methods and resources and to illustrate with problems that bring realism to the practice and importance of analytical chemistry It is designed for undergraduate college students majoring in chemistry and in fields related to chemistry

present even if only in a limited way to analytical targets Nowadays the landscape has become considerably complicated natural adulterants assessment of geographical origin sophistication need for non destructive analysis search for often unknown compounds and new procedures for processing data have greatly increased the potential of analyses that are conducted even routinely in the laboratory In this scenario chemometrics is master able to manage and process a huge amount of information based both on data relating only to the analytes of interest but also by applying general procedures to process raw untargeted analysis data It is within this strand of analysis that many of the works reported in this Special Issue fall In the succession of works in this printed version the criterion that guided us was to highlight how starting exclusively from chromatographic techniques HPLC and GC with conventional detectors and moving to exclusively spectroscopic techniques MS FT IR and Raman it is possible arrive at extremely powerful coupled techniques and procedures HPLC and FT IR able to meet research needs Finally at the end of the printed volume there are two reviews that surveying the state of the art regarding the assessment of authenticity through qualitative analyses and the application of chemometrics in the pharmaceutical field in the study of forced drug degradation products From the succession of works and above all from the various application fields it can immediately be seen how the application of chemometrics and its procedures to both raw and processed data is a powerful means of obtaining robust reproducible and predictive information In this manner it is possible to create models able to explain and respond to the original problem in a much more detailed way and Honghe through Fourier transform mid infrared FT MIR spectra combined with partial least squares discriminant analysis PLS DA random forest RF and hierarchical cluster analysis HCA methods Melucci and collaborators apply chemometric approaches to non destructive analysis of ATR FT IR for the determination of biosilica content This value was directly evaluated in sediment samples without any chemical alteration using attenuated total reflection Fourier transform infrared ATR FTIR spectroscopy and the quantification was performed by combining the multivariate standard addition method MSAM with the net analyte signal NAS procedure to solve the strong matrix effect of sediment samples Still in the food and food supplements field Anguebes Franeschi and collaborators report an article where 10 chemometric models based on Raman spectroscopy were applied to predict the physicochemical properties of honey produced in the state of Campeche Mexico
