Anatomy Of The Brain Youtube Music:

Broadway in the Box Kelly Kessler, 2020 It was as if American television audiences discovered the musical in the early 21st century In 2009 Glee took the Fox Network and American television by storm with the unexpected unification of primetime programming awkward teens and powerful voices spontaneously bursting into song After raking in the highest rating for a new show in the 2009 2010 season Glee would continue to cultivate rabid fans tie in soundtracks and merchandising and a spinoff reality competition show until its conclusion in 2015 Alongside Glee NBC and Fox would crank up musical visibility with the nighttime drama Smash and a string of live musical productions Then came ABC's comedic fantasy musical series Galavant and the CW's surprise Golden Globe darling My Crazy Ex Girlfriend Television and the musical appeared to be a perfect match But as author Kelly Kessler illustrates television had at that point been carrying on a sixty year symbiotic love affair with the musical From Rodgers and Hammerstein's appearance on the first Toast of the Town telecast and Mary Martin's iconic Peter Pan airings to Barbra Streisand's 1960s CBS specials The Carol Burnett Show Cop Rock Great Performances and a string of one off musical episodes of sitcoms nighttime soaps fantasy shows and soap operas television has always embraced the musical Kessler shows how the form is written across the history of American television and how its various incarnations tell the stories of shifting American culture and changing television film and theatrical landscapes She recounts and explores this rich decades long history by traversing musicals stars and sounds from film Broadway and Las Vegas to the small screen

Restless David J.

Gillard,2022-01-06 Why do many popular songs positively reference God if our culture is widely viewed as secular Why is it a challenge to tell the Christian story when many say they are spiritual and believe in God Why do we draw so much meaning from the popular songs we listen to And might a deeper understanding of popular music culture help us to explore the bigger stories we listen to throughout our lives such as the Christian story Primarily using Zygmunt Bauman s understanding of liquid modernity we look at the social forces that shape Western society and consider why while many are looking for authentic ontologically based stories to understand their life experiences historic providers of the big stories that shape our lives such as the church favor a different epistemological way of telling them How do these different approaches to storytelling affect their reception and what insight might we draw from that Whilst this book is written primarily with those in Christian ministry in mind it will be of interest too to those who use music to explore life experiences through their work who are interested in the social forces that shape society or who simply enjoy listening to popular music **The Power of Wonder**

Christos Frantzidis,Ana B. Vivas,Panagiotis D. Bamidis,2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration

functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease

Sight as Site in the Digital Age Kwok-kan Tam, 2023-12-30 This volume presents a broad coverage of theoretical issues that deal with digital culture representation and ideology in art and

museums and other cultural sites offering new insights into issues of representation in the digitization of art. It critically examines the roles of museum and archives in the digital age and reexamines the intricate relations between sight and site in art museums, exhibitions, theme parks, theatre performances, music videos, and films. The collection represents a multidisciplinary approach to the complex issues underlying the advent of technologies and digital culture. The rise of visual culture since the twentieth century can be accounted for by the advent of technology in film, TV, museum exhibitions, and the wide use of websites, but it can also be understood as a paradigmatic shift toward representation as a visual means to interpret culture with new understandings of the site/sight dilemma and the co-implications in related tensions. Complicating the issue of representation is the rise of digital culture as digital sites replace actual physical sites. This book explores how the virtual has replaced the actual and in what ways, and to what effects the digital has displaced the physical. With contributions by museum curators, communications scholars, visual artists, theatre artists, filmmakers, literary critics, and historians, this volume is of appeal to academics and graduate students in information science, art, media, performance, literary and cultural studies, and history. The book binds together different concepts such as site/sight and digitalization in a very original way. It convincingly gathers contributions from academics and practitioners, artists, and museum specialists. The chapters are theoretically well founded, show an interesting breadth of content, and are also dealing with current developments. Monika G. Nussbauer, Professor of Chinese and Head of the Institute of Asian, Middle Eastern, and Turkish Studies, Stockholm University, Sweden. The chapters raise important and latest questions and discussions on the impact of digital technology on art, culture, creativity, representation, and innovation. They are original in dealing with latest examples in recent years, especially during the pandemic, with reflections and philosophical discussions on the transformation digital culture undergoes in relation to human and posthuman contexts, with examinations of art works, archives, and museum collections, exhibitions, theme parks, theatre performances, films, and music videos that encompass cultures from ancient to contemporary, from the West to the East, and from physical to digital. Jack Leong, Associate Dean of Research and Open Scholarship, York University Libraries, Toronto, Canada.
