Automotive News, 2007 *Evaluation of the 2007 Toyota Camry Hybrid Synergy Drive System*, 2008 The U.S. Department of Energy (DOE) and American automotive manufacturers General Motors, Ford, and DaimlerChrysler began a five-year cost-shared partnership in 1993. Currently, hybrid electric vehicle (HEV) research and development is conducted by DOE through its FreedomCAR and Vehicle Technologies (FCVT) program. The mission of the FCVT program is to develop more energy-efficient and environmentally friendly highway transportation technologies. Program activities include research, development, demonstration, testing, technology validation, and technology transfer. These activities are aimed at developing technologies that can be domestically produced in a clean and cost-competitive manner. Under the FCVT program, support is provided through a three-phase approach, which is intended to:

1. Identify overall propulsion and vehicle-related needs by analyzing programmatic goals and reviewing industry's recommendations and requirements; then develop the appropriate technical targets for systems, subsystems, and component research and development activities.
2. Develop and validate individual subsystems and components, including electric motors, emission control devices, battery systems, power electronics, accessories, and devices to reduce parasitic losses.
3. Determine how well the components and subassemblies work together in a vehicle environment or as a complete propulsion system, and whether the efficiency and performance targets at the vehicle level have been achieved.
