Continuing the tradition of its predecessor, this new edition outlines a thorough discussion of different kinds of studies and guides readers through the important related decision making processes such as determining what information is needed and planning the collections process. The book equips readers with the knowledge to carry out these practices by explaining the various types of studies that are commonly conducted in the fields of medical and public health and how the level of evidence varies depending on the area of research. Data screening and data entry into statistical programs is explained and accompanied by illustrations of statistical analyses and graphs. Additional features of the Fourth Edition include: A new chapter on data collection that outlines the initial steps in planning biomedical and public health studies; A new chapter on nonparametric statistics that includes a discussion and application of the Sign test, the Wilcoxon Signed Rank test and the Wilcoxon Rank Sum test and its relationship to the Mann Whitney U test; An updated introduction to survival analysis that includes the Kaplan Meier method for graphing the survival function and a brief introduction to tests for comparing survival functions; Incorporation of modern statistical software such as SAS, Stata, SPSS and Minitab into the presented discussion of data analysis; Updated references at the end of each chapter. *Basic Statistics Fourth Edition* is an ideal book for courses on biostatistics, medicine and public health at the upper undergraduate and graduate levels.
