The Fetal Skeleton

1. Are the same skull bones seen in the adult also found in the fetal skull? Yes
2. How does the size of the fetal face compare to its cranium? Face is foreshortened, overshadowed by the large cranium. Maxillae and mandible are very tiny.

How does this compare to the adult skull? In the adult the cranium is proportionately smaller and the facial bones are proportionately larger and more prominent.

3. What are the outward conical projections on some of the fetal cranial bones? These are ossification (growth) centers.
4. What is a fontanel? A fibrous membrane connecting fetal skull bones.
What is its fate? Progressively ossified; replaced by a suture.
What is the function of the fontanel in the fetal skull? Allow fetal skull to be compressed slightly during birth passage; allow for fetal (and infant) brain growth.

5. Describe how the fetal skeleton compares with the adult skeleton in the following areas:

cranium: In the fetus, with the anterior fontanelles different and somewhat present.

mandible: In the fetus the maxilla, dentary, and zygomatic are separate bones. In the adult they form the big bones called maxilla and zygomatic.

scapula and humerus: Not ossified in the fetus.

carpals: All carpal bones are not found in the fetus.

basal hyoid: Absent; rudimentary in the fetus; absent in the adult.

pubis: Not fully formed in the fetus; symphysis is developed.

ischiac spine: Unossified rudimentary; rudimentary rudimentary; not even visible in the fetus.
