Your Amazing Digestive System

What happens to your food after you swallow it? Your body has a special system that works hard to break down everything you eat into smaller parts for growth, and repair.

Mouth and Esophagus

Your teeth tear and grind the food, while saliva (spit) starts to break it. Your tongue pushes the food to the back of your mouth, where you swallow it.

In the esophagus, a long, muscular tube that connects your mouth to your stomach, the esophagus squeeze and push the food down in a process called peristalsis.

In the stomach, it gets mixed with strong acids and enzymes that break it down like a blender, turning food into a thick, soupy mixture called chyme. It's just prepared for the next step.

What Happens

In the small intestine, a long, winding tube that's about 20 feet long! This is where most of the food gets absorbed into your bloodstream. Your liver and pancreas make juices that break food down even more.

Large Intestine

Waste moves into the large intestine. Here, water is removed from the waste, making it solid. Finally, the waste is stored in the rectum until it leaves your body.

Even when you're asleep! It keeps your body working as it needs. To keep your digestive system healthy.

Your body can use the nutrients to grow and stay healthy. Your digestive system is amazing!
