Each section consists of several chapters presenting the latest facts and opinion on the methodologies being adopted by the chemical industry to provide a more sustainable future. A follow up to *Materials for a Sustainable Future* (Royal Society of Chemistry 2012), this book will appeal to the same broad readership: industrialists and investors, policy makers in local and central governments, students, teachers, scientists and engineers working in the field, and finally editors, journalists and the general public who need information on the increasingly popular concepts of sustainable living.

Resource Efficiency of Processing Plants (Stefan Krämer, Sebastian Engell, 2018-05-07) This monograph provides foundations, methods, guidelines and examples for monitoring and improving resource efficiency during the operation of processing plants and for improving their design. The measures taken to improve their energy and resource efficiency are strongly influenced by regulations and standards which are covered in Part I of this book. Without changing the actual processing equipment, the way how the processes are operated can have a strong influence on the resource efficiency of the plants, and this potential can be exploited with much smaller investments than needed for the introduction of new process technologies. This aspect is the focus of Part II. In Part III we discuss physical changes of the process technology such as heat integration, synthesis and realization of optimal processes and industrial symbiosis. The last part deals with the people that are needed to make these changes possible and discusses the path towards a resource efficiency culture. Written with industrial solutions in mind, this text will benefit practitioners as well as the academic community.

Nonlinear and Mixed-Integer Optimization (Christodoulos A. Floudas, 1995-10-05) Filling a void in chemical engineering and optimization literature, this book presents the theory and methods for nonlinear and mixed integer optimization and their applications in the important area of process synthesis. Other topics include modeling issues in process synthesis and optimization based approaches in the synthesis of heat recovery systems, distillation based systems and reactor based systems. The basics of convex analysis and nonlinear optimization are also covered, and the elementary concepts of mixed integer linear optimization are introduced. All chapters have several illustrations and geometrical interpretations of the material as well as suggested problems. *Nonlinear and Mixed Integer Optimization* will prove to be an invaluable source either as a textbook or a reference for researchers and graduate students interested in continuous and discrete nonlinear optimization issues in engineering design, process synthesis, process operations, applied mathematics, operations research, industrial management and systems engineering.
