Indigenous and Black Confraternities in Colonial Latin America Javiera Jaque Hidalgo, Miguel Valerio, 2025-10-01 Employing a transregional and interdisciplinary approach this volume explores indigenous and black confraternities or lay Catholic brotherhoods founded in colonial Spanish America and Brazil between the sixteenth and eighteenth century It presents a varied group of cases of religious confraternities founded by subaltern subjects both in rural and urban spaces of colonial Latin America to understand the dynamics and relations between the peripheral and central areas of colonial society underlying the ways in which colonized subjects navigated the colonial domain with forms of social organization and cultural and religious practices The book analyzes indigenous and black confraternal cultural practices as forms of negotiation and resistance shaped by local devotional identities that also transgressed imperial religious and racial hierarchies The analysis of these practices explores the intersections between ethnic identity and ritual devotion as well as how the establishment of black and indigenous religious confraternities carried the potential to subvert colonial discourse Continuity and Change in Cultural Adaptation to Mountain Environments Ludomir R Lozny, 2013-03-12 Up until now mountain ecosystems have not been closely studied by social scientists as they do not offer a readily defined set of problems

for human exploitation as do for instance tropical forests or arctic habitats But the archaeological evidence had shown that humans have been living in this type of habitat for thousands of year From this evidence we can also see that mountainous regions are often frontier zones of competing polities and form refuge areas for dissident communities as they often are inherently difficult to control by centralized authorities As a consequence they fuel or contribute disproportionately to political violence But we are now witnessing changes and increasing vulnerability of mountain ecosystems caused by human activities Human adaptability to mountain ecosystems This volume presents an international and interdisciplinary account of the exploitation of and human adaptation to mountainous regions over time The contributions discuss human cultural responses to key physical and cultural stressors associated with mountain ecosystems such as aridity quality of soils steep slopes low productivity as well as transient phenomena such as changing weather patterns deforestation and erosion and the possible effects of climate change This volume will be of interest to anthropologists ecologists and geologists as mountainous landscapes change fast and cultures disappear and they need to be recorded and mountain regions are of interest for studies on environmental change and cultural responses of mountain populations provide clues for us all Critical to understanding mountain adaptations is our comprehension of human decision making and how people view short and long term outcomes
