Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Applying Neurobiological and Socio-Behavioral Sciences from Prenatal Through Early Childhood Development: A Health Equity Approach, 2019-12-27 Children are the foundation of the United States and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes. Despite substantial scientific evidence about how those adversities contribute to poor health, advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. **Vibrant and Healthy Kids: Aligning Science Practice and Policy to Advance Health Equity** builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions and recommendations about improving systems to better align with our understanding of the significant impact of health equity. **Using Children's Literature in Math and Science**, 1997

Subject Guide to Children's Books In Print, 1996 R R Bowker Publishing, 1996 **The Mythology of the Animal Farm in Children's Literature** Stacy E. Hoult-Saros, 2016-07-21 *The Mythology of the Animal Farm in Children's Literature: Over the Fence* analyzes the ways in which myths about farmed animals' lives are perpetuated in children's materials. Specifically, this book investigates the use of five recurring thematic devices in about eighty books for young children published during the past five decades. The close readings of texts and images draw on a wide range of fields including animal theory, psychoanalytic and Marxian literary criticism, child development theory, histories of farming and domestication, and postcolonial theory. In spite of the underlying seriousness of the project, the material lends itself to humorous and not overly heavy-handed explications that provide insight into the complex workings of a literary genre based on the covering up of real animal lives. **Kids Culture Catalog**, 1987-10 **Easy Make and Learn Projects - The Human Body** Donald M.

Silver, Patricia J. Wynne, Patricia Wynne, 2000-02 Contains easy instructions for making twenty models, manipulatives, and mini-books that will teach students in grades two through four about the human body. **Amplifying Informal Science Learning** Judy Diamond, Sherman Rosenfeld, 2023-06-30 This collection explores the broad landscape of current and future out-of-school science learning environments. Written by leading experts and innovators in informal science learning, these thoughtful and critical essays examine the changing nature of informal institutions such as science museums, zoos, nature centers, planetariums, aquaria, and botanical gardens, and their impact on science education. The book examines the learning opportunities and challenges created by community-based experiences, including citizen science, makerspaces, science media,

escape rooms hobby groups and gaming Based on current practices case studies and research the book focuses on four cross cutting themes inclusivity digital engagement community partnerships and bridging formal and informal learning to examine how people learn science informally The book will be of interest to STEM science technology engineering and math educators both in and out of school designers of science and experiential education programs and those interested in building STEM learning ecosystems in their communities

Experimental models of early exposure to alcohol: a way to unravel the neurobiology of mental retardation Alberto Granato,Andrea De Giorgio,2015-01-27 Excessive alcohol drinking represents a major social and public health problem for several countries Alcohol abuse during pregnancy leads to a complex syndrome referred to as fetal alcohol spectrum disorders FASD chiefly characterized by mental retardation The effects of early exposure to ethanol can be reproduced in laboratory animals and this helped to answer several key questions concerning the human pathology The interest of experimental models of FASD is twofold First they increase our knowledge about the dose and modality of alcohol consumption able to induce damaging effects on the developing brain Second experimental models of FASD can provide useful hints to elucidate the basic mechanisms leading to the intellectual disability In fact experimental exposure to alcohol can be carried out during discrete often very restricted time windows As a consequence FASD models though depending on the multifaceted interference of alcohol with several molecular pathways can provide valuable information about which specific developmental periods and brain areas are critically involved in the genesis of mental retardation Putting together data obtained through several experimental paradigms of alcohol exposure and those deriving from other genetic and non genetic models one can figure out to what extent different types of mental retardation share common pathogenetic mechanisms The present Research Topic is aimed at establishing the state of the art of the current research on experimental FASD focusing on differences and homologies with other types of intellectual disability The ultimate goal is to find out a common roadmap in view of future therapeutical approaches
