Balaban,2012-12-06 The application of magnetic resonance spectroscopy MRS to the cardiovascular system is a relatively new phenomenon Its ability to noninvasively examine myocardial metabolism has led to its use to answer basic questions in animal models of normal and diseased myocardium Extension of these investigations into the realm

of human myocardial metabolism has been made possible by the advent of relatively high field magnets with spectroscopy capabilities and sufficient bore dimensions to allow human studies While ongoing and future studies promise to enhance our understanding of myocardial metabolism their success will in part depend on a thorough understanding of the technical and biologic aspects of cardiovascular MRS as well as the current state of research in the many areas encompassed by this discipline It is with concept that the present monograph has been written The organization and content should lend this book to both the beginning reader who is interested but not conversant in cardiovascular MRS as well as to the active investigator who wishes to refer to a volume that deals with the many issues of this field in a concise but complete manner The monograph is structured with a general overview of the field followed by a section addressing the technical issues of cardiovascular MRS The next section is devoted to biologic issues of both normal and abnormal myocardial metabolism primarily devoted to investigations employing phosphorus 31 This is followed by a section dealing with more specialized issues generally involving other nuclei such as protons carbon and sodium Finally the clinical applications of cardiovascular MRS are addressed

Understanding and Developing Science Teachers' Pedagogical Content Knowledge John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31 There has been a growing interest in the notion of a scholarship of teaching Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit Pedagogical Content Knowledge PCK offers one way of capturing articulating and portraying an aspect of the scholarship of teaching and in this case the scholarship of science teaching The research underpinning the approach developed by Loughran Berry and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge Through this Resource Folio approach comprising CoRe and PaP eRs a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession This book is a concrete example of the nature of scholarship in science teaching that is meaningful useful and immediately applicable in the work of all science teachers preservice in service and science teacher educators It is an excellent resource for science teachers as well as a guiding text for teacher education Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice While PCK offers such a lens the construct is abstract In this book the authors have found an interesting and engaging way of making science teachers' PCK concrete useable and meaningful for researchers and teachers alike It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning Professor Julie Gess Newsome Dean of the Graduate School of Education Willamette University This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK The text provides

concrete examples of CoRes and PaP eRs completed in real life teaching situations that make stimulating reading The authors show practitioners and researchers alike how this approach can develop high quality science teaching Dr Vanessa Kind Director Science Learning Centre North East School of Education Durham University

3-D Imaging of Coronary Vessels Using C-arm CT Chris Schwemmer, 2019-06-26 Cardiovascular disease has become the number one cause of death worldwide For the diagnosis and therapy of coronary artery disease interventional C arm based fluoroscopy is an imaging method of choice While these C arm systems are also capable of rotating around the patient and thus allow a CT like 3 D image reconstruction their long rotation time of about five seconds leads to strong motion artefacts in 3 D coronary artery imaging In this work a novel method is introduced that is based on a 2 D 2 D image registration algorithm It is embedded in an iterative algorithm for motion estimation and compensation and does not require any complex segmentation or user interaction It is thus fully automatic which is a very desirable feature for interventional applications The method is evaluated on simulated and human clinical data Overall it could be shown that the method can be successfully applied to a large set of clinical data without user interaction or parameter changes and with a high robustness against initial 3 D image quality while delivering results that are at least up to the current state of the art and better in many cases
