Reproduction: Part A Peter K.T. Pang,1991-02-28 Vertebrate Endocrinology Fundamentals and Biomedical Implications Volume 4 Part A Reproduction provides information pertinent to the structure and function of the vertebrate reproductive endocrinology This book deals with a variety of subjects including oocyte maturation gestation ovulation vitellogenesis spermatogenesis and the maturation and aging of the reproductive system Organized into seven chapters this volume starts with an overview of the reproductive mechanisms and their underlying bases with focus on the similarities between species This book then discusses the factors of reproductive failure in many species including failure of ovulation abnormal fertilization failure of fertilization and failure of implantation Other chapters explore the cellular endocrinological and molecular mechanisms that regulate oocyte maturation in mammals which is directly stimulated by the need to improve human fertility and fecundity in domestic mammals The final chapter deals with the aging of the brain pituitary gonadal axis in vertebrates Reproductive endocrinologists and developmental neuroendocrinologists will find this book extremely useful

Pharmacology and the Nursing Process7 Linda Lane Lilley,Shelly Rainforth Collins,Julie S. Snyder,Diane Savoca,2014-01-01 Rev ed of Pharmacology and the nursing process Linda Lane Lilley et al 6th ed c2011 *Instructors Guide* Connie Will-Black,Judith Eighmy,2001-09 **Reproduction in Mammals** Virginia Hayssen,Teri J. Orr,2017-10-27 Newborn mammals can weigh as little as a dime or as much as a motorcycle Some receive milk for only a few days whereas others nurse for years Humans typically have only one baby at a time following nine months of pregnancy but other mammals have 20 or more young after only a few weeks in utero What causes this incredible reproductive diversity Reproduction in Mammals is a fascinating examination of the diverse reproductive strategies of a broad spectrum of mammals and the ways in which natural selection has influenced that diversity While accounts of reproduction in individual taxa abound this unique book s comprehensive coverage gathers stories from many taxa into a single cohesive perspective that centers on the reproductive lives of females The authors shed light on intriguing questions such as Do bigger moms have bigger babies Do primates have longer pregnancies than other groups Do aquatic animals have particular patterns Do carnivores like lions often produce larger litters than prey species The book opens with the authors definition of what constitutes a female perspective and an examination of the evolution of reproduction in mammals It then outlines the individual female her genetics anatomy and physiology From this nuanced basis the text progresses to mirror the female reproductive cycle and includes her interactions with males and offspring The final section contextualizes the reproductive cycle within the rest of the world both abiotic and biotic environments To close the authors include dedicated chapters on human concerns conservation and women as mammals Readers will come away from this thought provoking book with an understanding not

only of how reproduction fits into the lives of female mammals but also of how biology has affected the enormously diverse reproductive patterns of the phenotypes we observe today Provided by publisher

Anatomy and Physiology Preliminary Sampler Allen, 2001-11-07

Reproductive Sciences in Animal Conservation Pierre Comizzoli, Janine L. Brown, William V. Holt, 2019-08-30 This second edition emphasizes the environmental impact on reproduction with updated chapters throughout as well as complete new chapters on species such as sharks and rays This is a wide ranging book that will be of relevance to anyone involved in species conservation and provides critical perspectives on the real utility of current and

emerging reproductive sciences Understanding reproductive biology is centrally important to the way many of the world's conservation problems should be tackled Currently the extinction problem is huge with up to 30% of the world's fauna being expected to disappear in the next 50 years Nevertheless it has been estimated that the global population of animals in zoos encompasses 12 000 15 000 species and we anticipate that every effort will be made to preserve these species for as long as possible minimizing inbreeding effects and providing the best welfare standards available Even if the reproductive biology community cannot solve the global biodiversity crisis for all wild species we should do our best to maintain important captive populations Reproductive biology in this context is much more than the development of techniques for helping with too little or too much breeding While some of the relevant techniques are useful for individual species that society might target for a variety of reasons whether nationalistic cultural or practical technical developments have to be backed up by thorough biological understanding of the background behind the problems

Study Guide for Medical-Surgical Nursing - E-Book
Donna D. Ignatavicius, Cherie R.
