Following his highly successful book *Animal Kingdom* Jim Naughten brings to life historic specimens of the human body in this peculiarly enthralling collection of stereoscopic photographs. Historically stereoscopic photography was widely used in medicine as a teaching aid so it seems fitting that Jim Naughten's stereoscopic pictures of human specimens on display at the Vrolik Museum in Amsterdam transform science into art. With over 5 000 immaculately preserved objects the Vrolik has one of the largest collections of anatomical specimens in the world. Naughten has selected 50 of the most striking examples for this book including pathological specimens such as skeletons afflicted by rickets and other diseases of the bone, congenital malformations and dissected heads. Many are photographed in their original wood and glass specimen cases which lends them a haunting tone. Reproduced with stunning clarity these transfixing images take the reader on a fascinating journey through the history of the study of anatomy with the stereoscopic viewer permitting an immersive experience that is not possible with conventional photography.

This illustrated volume examines the different methods artists and anatomists used to reveal the inner workings of the human body and evoke wonder in its form. For centuries anatomy was a fundamental component of artistic training as artists such as Leonardo da Vinci and Michelangelo sought to skillfully portray the human form. In Europe illustrations that captured the complex structure of the body spectacularly realized by anatomists, artists and printmakers in early atlases such as Andreas Vesalius's *De humani corporis fabrica libri septem* of 1543 found an audience with both medical practitioners and artists. *Flesh and Bones* examines the inventive ways anatomy has been presented from the sixteenth through the twenty first century including an animated corpse displaying its own body for study, anatomized antique sculpture, spectacular life size prints, delicate paper flaps and 3 D stereoscopic photographs. Drawn primarily from the vast holdings of the Getty Research Institute the over 150 striking images which range in media from woodcut to neon reveal the uncanny beauty of the human body under the skin. This volume is published to accompany an exhibition on view at the Getty Research Institute at the Getty Center from February 22 to July 10 2022.
