

The background of the book cover is a photograph of ancient stone ruins. The ruins feature several large, semi-circular arches constructed from weathered, light-colored stone blocks. Some of the arches are partially collapsed or overgrown with green moss and small plants. The sky is a clear, bright blue. In the foreground, there are green bushes and trees, some of which are slightly out of focus.

Water Technology in the Middle Ages Roberta J. Magnusson, 2001-12-04 Focusing attention on gravity fed water flow systems in medieval cities and monasteries Water Technology in the Middle Ages Cities Monasteries and Waterworks after the Roman Empire challenges the view that hydraulic engineering died with the Romans and remained moribund until the Renaissance Roberta Magnusson explores the systems technologies how they worked what uses the water served and also the social rifts that created struggles over access to this basic necessity Mindful of theoretical questions about what hastens technological change and how society and technology mutually influence one another the author supplies a thoughtful and instructive study Archeological historical and literary evidence vividly depicts those who designed constructed and used medieval water systems and demonstrates a shift from a public administrative to a private innovative framework one that argues for the importance of local initiatives The following chapters attempt to chart a course between the Scylla and Charybdis of technological and social determinism While writing them I have tried to strike a balance between the technical and human aspects of medieval hydraulic systems and to remember that beneath the welter of documents and diffusion patterns configurations and components ordinances and expenditures lie the perceptions the choices and often the plain hard work of individual men and women from the Preface

Arid Lands Water Evaluation and

Management Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions
