Hugh C. Black, 1994 **Tracking Environmental Change Using Lake Sediments** John P. Smol, H.J. Birks, William M. Last, 2006-04-11 Paleolimnology is a rapidly developing science that is now being used to study a suite of environmental and ecological problems This volume is the fourth handbook in the Developments in Paleoenvironmental Research book series

The first volume Last Smol 2001a examined the acquisition and archiving of sediment cores chronological techniques and large scale basin analysis methods Volume 2 Last Smol 2001b focused on physical and chemical methods Volume 3 Smol et al 2001 along with this book summarize the many biological methods and techniques that are available to study long term environmental change using information preserved in sedimentary profiles A subsequent volume Birks et al in preparation will deal with statistical and data handling procedures It is our intent that these books will provide sufficient detail and breadth to be useful handbooks for both seasoned practitioners as well as newcomers to the area of paleolimnology These books will also hopefully be useful to non paleolimnologists e g limnologists archeologists palynologists geographers geologists etc who continue to hear and read about paleolimnology but have little chance to explore the vast and sometimes difficult to access journal based reference material for this rapidly expanding field Although the chapters in these volumes target mainly lacustrine settings many of the techniques described can also be readily applied to fluvial glacial marine estuarine and peatland environments This current volume focuses on zoological indicators preserved in lake sediments whilst Volume 3 focused on terrestrial algal and siliceous indicators

Biology Jake Bernstein,1996

Applications of Computational Intelligence in Biology Tomasz G. Smolinski,Mariofanna G. Milanova,Aboul-Ella Hassanien,2008-05-27 Computational Intelligence CI has been a tremendously active area of search for the past decade or so There are many successful applications of CI in many sub elds of biology including bioinformatics computational nomics protein structure prediction or neuronal systems modeling and an ysis However there still are many open problems in biology that are in d perate need of advanced and e cient computational methodologies to deal with tremendous amounts of data that those problems are plagued by fortunately biology researchers are very often unaware of the abundance of computational

techniques that they could put to use to help them analyze and understand the data underlying their research inquiries On the other hand computational intelligence practitioners are often unfamiliar with the particular problems that their new state of the art algorithms could be successfully applied for The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other The purpose of this book is to provide a medium for such an exchange of expertise and concerns In order to achieve the goal we have solicited contributions from both computational intelligence as well as biology researchers
