Introductory Econometrics Humberto Barreto, Frank Howland, 2006 This highly accessible and innovative text with supporting web site uses Excel R to teach the core concepts of econometrics without advanced mathematics It enables students to use Monte Carlo simulations in order to understand the data generating process and sampling distribution Intelligent repetition of concrete examples effectively conveys the properties of the ordinary least squares OLS estimator and the nature of heteroskedasticity and autocorrelation Coverage includes omitted variables binary response models basic time series and simultaneous equations The authors teach students how to construct their own real world data sets drawn from the internet which they can analyze with Excel R or with other econometric software The accompanying web site with text support can be found at www.wabash.edu/econometrics Introductory Econometrics: Asia Pacific Edition with Online Study Tools 12 Months Jeffrey M. Wooldridge, Mokhtarul Wadud, Jenny Lye, 2016-10-24 Econometrics is the combined study of economics and statistics and is an applied unit It is increasingly becoming a core element in finance degrees at upper levels This first local adaptation of Wooldridge's text offers a version of Introductory Econometrics with a structural redesign that will better suit the market along with Asia Pacific examples and data Two new chapters at the start of the book have been developed from material originally in Wooldridge's appendix section to serve as a clear introduction to the subject and as a revision tool that bridges students transition from basic statistics into econometrics This adaptation includes data sets from Australian and New Zealand as well as from the Asia Pacific region to suit the significant portion of finance students who are from Asia and the likelihood that many graduates will find employment overseas *Econometric Analysis of Cross Section and Panel Data, second edition* Jeffrey M. Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author's own recent research of inverse

probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Exploratory Data Analysis in Business and Economics Thomas Cleff, 2013-11-12 In a world in which we are constantly surrounded by data figures and statistics it is imperative to understand and to be able to use quantitative methods Statistical models and methods are among the most important tools in economic analysis decision making and business planning This textbook Exploratory Data Analysis in Business and Economics aims to familiarise students of economics and business as well as practitioners in firms with the basic principles techniques and applications of descriptive statistics and data analysis Drawing on practical examples from business settings it demonstrates the basic descriptive methods of univariate and bivariate analysis The textbook covers a range of subject matter from data collection and scaling to the presentation and univariate analysis of quantitative data and also includes analytic procedures for assessing bivariate relationships It does not confine itself to presenting descriptive statistics but also addresses the use of computer programmes such as Excel SPSS and STATA thus treating all of the topics typically covered in a university course on descriptive statistics The German edition of this textbook is one of the bestsellers on the German market for literature in statistics

Computational Intelligent Data Analysis for Sustainable Development Ting Yu, Nitesh Chawla, Simeon Simoff, 2016-04-19 Going beyond performing simple analyses researchers involved in the highly dynamic field of computational intelligent data analysis design algorithms that solve increasingly complex data problems in changing environments including economic environmental and social data

Computational Intelligent Data Analysis for Sustainable Development presents novel methodologies for automatically processing these types of data to support rational decision making for sustainable development Through numerous case studies and applications it illustrates important data analysis methods including mathematical optimization machine learning signal processing and temporal and spatial analysis for quantifying and describing sustainable development problems With a focus on integrated sustainability analysis the book presents a large scale quadratic programming algorithm to expand high resolution input output tables from the national scale to the multinational scale to measure the carbon footprint of the entire trade supply chain It also quantifies the error or dispersion between different reclassification and aggregation schemas revealing that aggregation errors have a high concentration over specific regions and sectors The book summarizes the latest contributions of the data analysis community to climate change research A profuse amount of climate data of various types is available providing a rich and fertile playground for future data mining and machine learning research The book also pays special attention to several critical challenges in the science of climate extremes that are not handled by the current generation of climate models It discusses potential conceptual and methodological directions to build a close integration between physical understanding or physics based modeling and data driven insights The book then covers the conservation of species and ecologically valuable land A case study on the Pennsylvania Dirt and Gravel Roads Program demonstrates that multiple objective linear programming is a more versatile and efficient approach than the widely used benefit targeting

selection process Moving on to renewable energy and the need for smart grids the book explores how the ongoing transformation to a sustainable energy system of renewable sources leads to a paradigm shift from demand driven generation to generation driven demand It shows how to maximize renewable energy as electricity by building a supergrid or mixing renewable sources with demand management and storage It also presents intelligent data analysis for real time detection of disruptive events from power system frequency data collected using an existing Internet based frequency monitoring network as well as evaluates a set of computationally intelligent techniques for long term wind resource assessment In addition the book gives an example of how temporal and spatial data analysis tools are used to gather knowledge about behavioral data and address important social problems such as criminal offenses It also applies constraint logic programming to a planning problem the environmental and social impact assessment of the regional energy plan of the Emilia Romagna region of Italy Sustainable development problems such as global warming resource shortages global species loss and pollution push researchers to create powerful data analysis approaches that analysts can then use to gain insight into these issues to support rational decision making This volume shows both the data analysis and sustainable development communities how to use intelligent data analysis tools to address practical problems and encourages researchers to develop better methods

History and Economic Life Georg Christ, Philipp R. Rössner, 2020-02-27 *History and Economic Life* offers students a wide ranging introduction to both quantitative and qualitative approaches to interpreting economic history sources from the Middle Ages to the Twentieth Century Having identified an ever widening gap between the use of qualitative sources by cultural historians and quantitative sources by economic historians the book aims to bridge the divide by making economic history sources more accessible to students and the wider public and highlighting the need for a complementary rather than exclusive approach Divided into two parts the book begins by equipping students with a toolbox to approach economic history sources considering the range of sources that might be of use and introducing different ways of approaching them The second part consists of case studies that examine how economic historians use such sources helping readers to gain a sense of context and understanding of how these sources can be used The book thereby sheds light on important debates both within and beyond the field and highlights the benefits gained when combining qualitative and quantitative approaches to source analysis Introducing sources often avoided in culturally minded history or statistically minded economic history courses respectively and advocating a combined quantitative and qualitative approach it is an essential resource for students undertaking source analysis within the field
