Cumulated Index Medicus, 1989 **Riprap Design Criteria, Recommended Specifications, and Quality Control**

Peter Frederick Lagasse, National Cooperative Highway Research Program, 2006 TRB's National Cooperative Highway Research Program NCHRP Report 568 Riprap Design Criteria Recommended Specifications and Quality Control examines design guidelines recommended material specifications and test methods recommended construction specifications and construction inspection and quality control guidelines for riprap for a range of applications including revetment on streams and riverbanks bridge piers and abutments and bridge scour countermeasures such as guide banks and spurs *Sequence Stratigraphy and Facies Associations* Henry W. Posamentier, 2009-04-15 In recent years there has been a virtual explosion of stratigraphic studies utilizing the principles of sequence stratigraphy Although the concept of time stratigraphy is not new the packaging of depositional units into systems tracts and sequences is This new approach has led to the reassessment of areas that in some cases have been the subject of intense geological scrutiny for decades The fundamental principles upon which sequence stratigraphy is based are applicable at a broad range of temporal and physical scales This volume arises from several sessions on sequence stratigraphy held at the Thirteenth International Sedimentological Congress with emphasis on facies associations within a sequence stratigraphic framework Holocene Evolution of Zeeland (SW Netherlands) M. M. Fischer, 1997 **Orbital Forcing and Cyclic Sequences** P. L. DeBoer, D. G. Smith, 2009-04-08

Classically orbital cycles have been recognized in pelagic and lacustrine sequences characterized by quiet sedimentation not disturbed by tectonics However there is now increasing recognition that orbital cycles do influence climate and oceanography in general terms There is also increasing acceptance of the possibility at least that the effect should be felt over large parts of the Earth's surface and that orbital cycles may well leave signs in other sedimentary environments that are commonly considered to be dominated by tectonics and eustasy Containing thirty one papers from a symposium held at the International Sedimentological Congress in Nottingham in 1990 this volume spans a range of topics from the astronomical theory behind orbital forcing to field studies dealing with a broad range of sedimentary environments and to modelling and simulation State of the art research papers International expert authorship The latest research in the highly topical subject of orbital forcing Coarse-Grained Deltas Albina Colella, David Prior, 2009-03-30 This Special Publication contains most of the contributions presented at the 1st International Workshop on Fan Deltas 1988 but also contains additional papers which make this particular volume a very well rounded reference source for the advanced undergraduate graduate student and the professional earth scientist concerned with sedimentology and petroleum geology The papers describe the sedimentology and tectonic setting of this important depositional environment Coarse grained deltas ranging

from sand to gravelly are fully covered and the main focus is on steep face systems whose steep subaqueous slopes are dominated by high energy processes The volume includes case histories from around the world and throughout the book there is emphasis on the subaqueous realm of the delta face its sedimentary processes and facies associations **ICASSP 88: V & E, VLSI, spectral estimation**, 1988 **Mass Spectrometry** M E Rose, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *Sedimentation, Tectonics and Eustasy* David I. M. Macdonald, 2009-04-15 Over the last ten years seismic and sequence stratigraphic studies have emphasized the role of worldwide fluctuations in sea level in controlling patterns of sedimentation Widely recognized cycles of coastal onlap are thought to have been caused by such global changes This postgraduate and reference text contains contributions from an international team of specialists The book is based upon an IAS meeting which focused attention on the situation at active plate margins covering three major themes the underlying mechanics and rates of relative sea level change at active plate margins the interaction of eustatic and tectonic processes at modern margins recognition of the products in the sedimentary record and possible criteria for distinguishing global eustatic from local tectonic effects This book is intended for those studying and working in sedimentology basin analysis exploration geophysics and petroleum geology **MX & Off-Road Performance Handbook -3rd Edition** Eric Gorr, *Sequence Stratigraphy on the Northwest European Margin* R.J. Steel, V.L. Felt, E.P. Johannesson, C. Mathieu, 1995-07-04 Sequence Stratigraphy presently one of the most rapidly growing areas in geology is concerned with the documentation and prediction of how sandstones potential hydrocarbon reservoirs and shales potential source rocks are distributed in time and space within sedimentary basins The book takes a critical look at some of the sequence stratigraphy concepts and provides an account of how these have been applied recently in NW Europe North Sea mid Norway and E Greenland Barents Sea and Svalbard mainly in connection with the exploration for oil and gas There is currently no similar book available Weddell Sea Ecology Gotthilf Hempel, 2012-12-06 **ICASSP 88: A**

& U, audio & electroacoustics, underwater signal processing ,1988 The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues Ian D. Bryant, Stephen S. Flint, 2009-04-08 The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues is a collection of 15 selected papers taken from the Symposium of the same name which formed part of the IAS Congress of 1990 held in Nottingham UK Recent technological advances and the ever increasing demand for maximising recovery from existing oil and gas fields has led to an upsurge of interest at both academic and industrial levels in reservoir characterization and quantitative modelling of physical rock properties in 3 D inter well space Synthesizing both industrial and academic research and integrating sedimentology petroleum geology geostatistic and geomathematics this volume is a state of the art presentation of approaches to quantifying geology in order to give better input to 3 D numerical reservoir modelling methods It is the first IAS volume to highlight the necessary interface with academic and oil industry geology by showing how academic research can significantly support the mathematical modelling work of reservoir engineers in industry and contributions to the volume come from an expert international team comprised of university government and international oil industry scientists *Index to IEEE Publications* Institute of Electrical and Electronics Engineers, 1990 Issues for 1973 cover the entire IEEE technical literature Coal Geology Larry Thomas, Larry P. Thomas, 2002 Coal Geology provides a complete integrated handbook on coal and all its properties covering the physical and chemical properties of coal as well as coal petrology It describes the age and occurrence of coal coal sampling and analysis coal exploration geophysics and hydrogeology of coal and coal mining techniques It also discusses environmental concerns and computer technology and includes an update on global coal reserves and production figures First reference book to cover all aspects of coal geology in one volume Includes current thinking on environmental issues Presents a useful synopsis of the alternative uses of coal as a fuel Contains the distribution and reserves of coal deposits worldwide Offers a summary of the use of computing in coal studies as well as coal sales and marketing opportunities Includes International Standards listings This up to date handbook successfully bridges the gap between academic aspects of coal geology and the practical role of geology in the coal industry and will be invaluable for all professionals and students in coal geology geotechnical and mining engineering and environmental science *Aeolian Sediments* Kenneth Pye, N. Lancaster, 2009-04-06 Studies of aeolian sediments both ancient and modern have exhibited a number of important conceptual advances in recent years In particular there has been a move away from descriptions of sediments bedforms and sedimentary environments toward a new emphasis on the dynamics of aeolian depositional systems at different temporal and spatial scales and their response to external changes in sea levels regional and global climates and tectonics This Special Publication contains a selection of papers that were presented at the Symposium Aeolian Sediments Ancient and Modern held in 1990 It also includes a number of contributions from authors who were not able to attend the meeting but whose work reflects important aspects of contemporary research in aeolian sedimentology State of the art research papers in

aeolian sedimentology International expert authorship Of relevance to modern concerns about global climate change If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP16> *Health Policy/spec Sale/avail Hard Only* Antonio Furino, 2019-04-16 Exploring the many dimensions of Hispanic health issues this book updates interested readers with recent information and offers a view of the depth scope and complementarity of the challenges of providing adequate health care Accordingly the book is organized in four sections addressing first the conceptual institutional and policy element
