Mathematical Methods on Optimization in Transportation Systems M. Pursula, Jarko Niittymäki, 2013-12-14 This book contains selected papers from the presentations given at the 7th EURO Working Group Meeting on Transportation which took place at the Helsinki University of Technology HUT Finland during August 2-4 1999 Altogether 31 presentations were given and 14 full papers have been selected in this publication through a peer review process coordinated by the editors The papers in this book cover a wide range of transportation problems from the simulation of railway traffic to optimum congestion tolling and mode choice modeling with stated preference data In general the variety of papers clearly demonstrates the wide areas of interest of people who are involved in the research of

transportation systems and their operation They as well demonstrate the importance and possibilities of modeling and theoretical approaches in the analysis of transportation systems and problem solving Most of the papers are purely theoretical in nature that is they present a theoretical model with only a hypothetical example of application There are however some papers which are closer to the practice or describe applications of and give interesting results of studies made by known methodologies It is especially noteworthy that half of the accepted papers deal with planning and operation of public transport

Bode's Law and the Discovery of Juno Clifford J. Cunningham, 2017-06-02 Johann Bode developed a so called law of planetary distances best known as Bode's Law The story of the discovery of Juno in 1804 by Karl Harding tells how Juno fit into that scheme and is examined as it relates to the philosopher Georg Hegel's 1801 thesis that there could be no planets between Mars and Jupiter By 1804 that gap was not only filled but had three residents Ceres Pallas and Juno When Juno was discovered no one could have imagined its study would call into question Newton's law of gravity or be the impetus for developing the mathematics of the fast Fourier transform by Carl Gauss Clifford Cunningham a dedicated scholar opens to scrutiny this critical moment of astronomical discovery continuing the story of asteroid begun in earlier volumes of this series The fascinating issues raised by the discovery of Juno take us on an extraordinary journey The revelation of the existence of this new class of celestial bodies transformed our understanding of the Solar System the implications of which are thoroughly discussed in terms of Romantic Era science philosophy poetry mathematics and astronomy The account given here is based on both English and foreign correspondence and scientific papers most of which are translated for the first time
