J. Dainty,Carl Abbott,2015-04-20 Construction innovation is an important but contested concept both in industry practice and academic reflection and research A fundamental reason for this is the nature of the construction industry itself the industry and the value creation activities taking place there are multi disciplinary heterogeneous distributed and often fragmented This book takes a new approach to construction innovation revealing different perspectives set in a broader context It coalesces multiple theoretical and practice based views in order to stimulate reflection and to prepare the ground for further synthesis By being clear cogent and unambiguous on the most basic definitions it can mobilise a plurality of perspectives on innovation to promote fresh thinking on how it can be studied enabled measured and propagated across the industry This book does not gloss over the real life complexity of construction innovation Instead its authors look explicitly at the challenges that conceptual issues entail and by making their own position clear they open up fresh intellectual space for reflection Construction Innovation examines innovation from different positions and through different conceptual lenses to reveal the richness that the theoretical perspectives offer to our understanding of the way that the construction sector actors innovate at both project and organizational levels The editors have brought together here leading scholars to deconstruct the concept of innovation and to discuss the merits of different perspectives their commonalities and their diversity The result is an invaluable sourcebook for those studying and leading innovation in the design the building and the maintenance of our built environment *Moody's International Manual* ,2000 Labor Relations Reference Manual ,2002 Vols 9 17 include decisions of the War Labor Board *Industry and Environment* ,1993 Engineers of Independence Paul K.
